

CONQUER YOUR EXAM

671 EPIC AP STUDY TIPS

**To Help You Conquer 12 of the Most
Popular AP Exams**

ABOUT US

Back in school, we were you. The anxious, sleep-deprived teenagers striving endlessly to do well on their high-pressure exams to get into great universities.

We studied hard and most importantly learned which study materials were most impactful in accelerating learning. Our hard work paid off.

We scored 4s and 5s in every single Advanced Placement class we took. We applied to the top universities, and got in. Not just that though, our credits from our AP classes meant we saved thousands of dollars in college.

Whether you're a struggling student or in the top 10% of your graduating class, Conquer Your Exam is for you.

Our mission is to help students, parents, and teachers quickly find which resources they should be using to bring their 'A' game on test day.

Conquer Your Exam offers the most fair and comprehensive buyer's guides for tough exams. Unlike others, we deeply investigate the strengths and the weaknesses of different resources. We don't publish reviews just for the sake of publishing them. Aside from actually looking into each product, we further support our research by understanding how educators and tutors in these respective subjects feel about each resource. We believe when you're deciding which resources to use for your exam, you should know what is the best of the bunch, which resources were close runner-ups, and which offer the best bang for your buck (after all, student debt is on the rise)!

Aside from our book reviews, we cover comprehensive tips and strategies for you to become a better student.

In this extensive AP resource, you'll walk away with **671 actionable test talong tips and strategies** for 12 of the key AP subjects! We'll detail general study tips, multiple choice strategies, FRQ and DBQ essentials, and test day must knows.

For more tips and resources, follow us at www.conqueryourexam.com.

AP Biology Tips and Test Taking Strategies

 conquereyourexam.com/ap-biology-tips/

What's the next AP test that you're looking at? If it's the AP Biology exam, then you're definitely in the right place because we're going to take a closer look at AP Biology tips and test-taking strategies. These tips are designed to help you get a 5 on your test by creating a great AP Bio exam review.

What we've done is take a look at some of the most important information when it comes to taking this test and the AP Biology revised curriculum, and we've turned it into a list for you to look at. By going through this AP Biology study guide, and using these tips to help you study along the way, we know you're going to do even better.

The first thing you should know is that CollegeBoard is responsible for this test, and that makes them your number one resource when you get started on your studying. We'll tell you what you should be looking to them for and just how they're going to make a difference in your test strategy.

Keep in mind though that CollegeBoard isn't going to be your only source for information. You're still going to need some other sources, as well as your own skill in studying and creating your study sheets. These tips and tricks should help you along a little better and make your studying a bit easier while you're at it.

Let's just jump right in and take a closer look at what you're going to need to know when it comes to getting started on studying for your AP Biology exam. You'll learn how to study for AP Biology class and how to get help with AP Biology exams. Hopefully, each of these tips is going to help you along the way.

If you're looking for extra help, a review book can be the way to go. **[Check out our guide to the best AP Biology review books here.](#)**

AP Biology General Study Tips

General How to Study for AP Biology Tips

When it comes to taking any test or exam there are a few strategies that you always know are going to help you. We'll start by taking a look at some of these. When it comes to the AP Biology test you want to make sure you're putting in enough of the work and that you're actually studying in the right ways. After all, you don't want to miss out on the more obvious things, right?

1. **Understand topics conceptually** – You don't want just to know the information. You need to understand the concepts, and you need to understand how to apply or utilize the information in an effective way. That's going to allow you to answer the questions.
2. **Always do the reading** – When you're taking the class make sure that you do all of the reading that's assigned as this is going to help you remember the information. You'll get a basic understanding of the information this way and learn more about what you need to focus on.
3. **Take as many practice tests as you can** – Taking practice tests is going to help you understand what the questions look like in the real test. It's also going to give you more information about what information you know and what type of information you're not familiar with. These may also offer AP Biology practice questions by chapter.
4. **Differentiate, analyze and apply knowledge** – These are the three skills that you're primarily being tested on so make sure that you're paying attention to each of them and that you know how to do this for each of the topics that are going to be studied.
5. **Look at old FRQ's** – These are some of the hardest questions you're going to find, especially being in the hardest topic area. Make sure you understand how these questions are written and what they are asking you for. You'll be able to see how these are scored as well.
6. **Check practice questions on CollegeBoard** – Once again, CollegeBoard is responsible for creating the test itself, so if you go on the website you'll see more about official questions. This is going to help you prepare for what you're actually going to see on test day. You can use AP Biology multiple choice released exams.
7. **Answer every question** – Do not skip any questions for any of the sections. You're not going to lose any points if you get an answer wrong, which means you really need to put something down, especially when it comes to free response questions.
8. **Study only what's being tested** – Take a look at the specific topics that are actually being tested and then only work on those areas. You don't want to waste your time studying areas that you're never going to be tested on because you're going to want that time for things that you need.
9. **Understand the diagrams** – Know the diagrams for different functions, different concepts and a whole lot more. You should practice drawing out all the different diagrams until you know them well enough that you could draw them on the exam without a problem.

10. **Know the 4 big ideas from CollegeBoard** – There are 4 big ideas from CollegeBoard that the test is primarily going to focus on so make sure you have a strong understanding of each of these and how they relate to each other and everything else you're studying.
11. **Underline terms as you read the question** – While you're reading through a question just take a few minutes to underline the important terms or words that are going to define what the question is actually asking. That way you aren't going to get tricked by the wrong answer.
12. **Know how and why for each topic** – You can't just know that something happens. You're also going to need to know how it actually works. Make sure you're studying each of these concepts when it comes to the important topics for the overall test.
13. **Use study sheets and outlines** – Creating your own study sheets is going to be one of the best ways that you can study the information. You know what areas you need to focus on so make sure you're writing up outlines and other notes that are going to focus there. You'll do best with your own AP Biology cram packet.
14. **Budget your time well** – You have a certain amount of time for each portion of the test so make sure you're aware of the time and that you know how much time you actually have left at every stage. You want to make sure you balance out the time you're taking for each of the questions.
15. **Remember to study your labs** – Labs are actually going to be a very big part of this test so make sure you look at the labs you've done and the ones you've read about so you can easily answer questions about them. You want to make sure you have a strong understanding of how they work and what they're telling you.
16. **Know why you're making mistakes** – When you take practice tests or look at practice questions you want to know why you're getting certain questions wrong. This is going to help you figure out where you should be spending more of your study time, and it's going to help you improve.
17. **Check out study videos** – There are all kinds of videos available online and on YouTube especially. These videos, on AP Biology review websites, are going to make it a whole lot easier for you to cram a lot more information into a smaller span of time. You may be surprised just what you can find in a video (especially ones made by teachers).
18. **Read study books** – There are a lot of options for a good AP Biology study guide book out there, but you're definitely going to want to look at Princeton and Barron's. These are two of the most popular study books for just about any type of test, and for very good reason. They cover the material well, and they also provide practice questions and tests to go through. [An AP Biology review book](#) could be a great tool.
19. **Keep up during class** – If you can keep up during the class, you're going to have a much better chance of getting through the rest of your studying more easily. You want to make sure you know the information the first time through and if you don't, when you're learning in class is the best time to start working on studying.

20. **Use a Study Group** – A study group can help you stay motivated, and they can also help you study in areas where you might not be as confident. That way you can each help each other, and you'll be able to teach, which is a great way to help yourself remember information.

AP Biology Multiple Choice Tips

AP Biology Multiple Choice Tips

When it comes to the first section, you're going to have multiple choice and grid response questions that cover each of the AP Biology units in your class. For this, we'll separate them into two different study sections, but know that they count together when it comes to timing and grading. You'll get 1 hour and 30 minutes to complete 63 multiple choice questions and 6 grid questions. Together, all of these will account for 50% of your total score on the AP Biology test.

21. **Read multiple choice questions first** – Remember, this section actually consists of multiple choice and grid-in questions. Make sure you're reading through the multiple choice options first before you jump into the grid-in ones.
22. **Answer the questions you know** – When you get to these questions make sure you read through each of the questions first and start with the ones you know immediately. You might find several that you don't even need to think about so make sure you fill in the bubble.
23. **Choose the best answer** – Make sure you choose the best answer rather than only choosing a correct answer. Read every single answer before you choose an answer so you can make sure you have the best answer and you're not missing it for a less good answer.
24. **Make educated guesses** – If you get down to questions, you aren't sure about make sure you take an educated guess. You should never leave an answer blank, but don't just blindly choose either. You can usually get rid of one or more answers and then you'll have a better chance of getting the question right.
25. **Budget your time carefully** – If you budget your time well, you'll be able to get to all of the questions before you run out. Make sure you pay attention to just how much time you actually have for each question and try to stick to that limit, at least the first time through.

26. **Practice data questions** – Data questions are some of the harder ones for this section, so when you're studying you should definitely be taking a look at them and at how they're going to impact your ability. You don't want to miss points because you didn't know how to read the information.
27. **Recognize patterns and exceptions** – Learn how to recognize a pattern in a type of question or how to read for an exception to it. This is going to apply to things like graphs and charts as well, so you can quickly and easily find what you're being asked for.
28. **Know how to read charts and graphs** – These are both going to be in the test so make sure you know how to use them and what they're telling you just by looking at them. You definitely don't want to miss a question because you don't know how to read the graph.
29. **Understand what the question is asking for** – Read all of the words in the question, so you know what it's actually asking for. Missing or skipping over one word (like always or never) could completely change the meaning of the question causing you to get it wrong.

AP Biology Grid-In Response Tips

AP Biology Grid-In Response Tips

You're going to have 6 total questions for the grid-in response questions, but the time that you're given is going to be for this as well as the multiple choice questions. Make sure you pay attention to the time when you're working on these as well as multiple choice. Also, make sure you keep in mind each of the tips in this section because these questions can make it a little difficult to fill in the bubbles and to make sure you're answering properly.

30. **Units aren't required** – When it comes to these questions, you don't need to worry about units. You're going to be filling in a grid, which means you're not going to have a space to write down the specific units. Just make sure you know them when you're doing any math required.
31. **Start in any column** – You can actually start in any column with your answer as long as you fill in the bubbles in the right way. Look at the examples that are provided in the section above and use the columns to create the answer that you want based on that.
32. **Grid answers properly** – Make sure you follow the prompt and the example in order to fill in the bubbles right. You don't want to lose points because you made a mistake with the grids.

33. **Don't bother memorizing formulas** – You're not going to need to memorize the formulas for this test because all of them are actually going to be provided to you in a list. Don't waste your study time trying to memorize all the information. You should be focusing on other things.
34. **Analyze information carefully to make a decision** – With this section, the point is to make sure that you know how to analyze information carefully and then make a decision. Make sure you're practicing this skill when you're looking at old questions and even creating your own.
35. **You may use a calculator for these questions** – You are allowed to use a calculator for these types of questions and the rules have recently been changed to allow you to use a scientific or graphing calculator rather than needing an old and basic options.
36. **You have to do all calculations yourself** – You will not be given any options or choices when it comes to these questions. Instead, you're going to have to do all of the calculations on your own, and you'll have to come up with your own answers from nothing.

AP Biology Free Response Questions Tips

AP Biology Free Response Questions Tips

When it comes to the AP Bio FRQ answers, you're going to have a total of 80 minutes to answer 8 questions. That means you'll have about 10 minutes per question, but you might not want to use it that way. That's because you're going to have 6 short answer questions and 2 long answer questions, altogether, these make up the other 50% of your test score. Before you get into the answer portion; however, you're going to have a full 10 minutes just set aside for reading. Pay attention to more than just AP Biology free response cellular respiration and other topics.

37. **Use the whole reading period** – You're going to have a full 10 minutes for reading through the questions that doesn't count toward the 80 that you get to answer. Make sure you're reading during that period and taking advantage of the extra time to formulate a plan.
38. **Define all the terms** – Make sure that any terms you use in your answer you're actually defining as well. You need to know what the terms mean, and you need to make sure you show the reader that you know how they actually apply when it comes to your answer.

39. **Connect concepts with big ideas** – You should be able to connect the smaller concepts with one (or more) of the 4 big ideas that we talked about earlier. Make sure you study this concept and that you specify how the two things connect when you answer the question.
40. **Write in paragraph form** – Make sure you write out full paragraphs when you're writing your answer, but you don't need to have a full 5 paragraph essay with an introduction and a conclusion. You just need to make sure all of your information is presented well.
41. **Write full sentences** – You will lose points if you use bullets or sentence fragments to try to get your message across. Make sure that you're using full sentences and that you exhibit your ability to understand the question and then formulate an accurate response.
42. **Cross out anything you don't want to be included** – You don't have to erase information that you don't want to include or that you change your mind about. You are allowed to simply cross out the information and then you can continue writing the rest of the information you want.
43. **Know the different types of questions and how to answer them** – There are specific types of questions that will be included on the test. Make sure you know what each of them is and what they're actually asking for so you can answer them properly (such as explain or judgment questions).
44. **Use the scientific argument format** – This format requires you to make a claim, provide evidence and then provide reasoning. You should know how to do this for each of the questions that you're answering and make sure you spell out each one in your answer.
45. **Label different sections in your answer** – There are generally going to be multiple sections to the question that are labeled a., b., c., etc. When you're answering the question feel free to include these labels in the answer to make sure that you're answering each of the sections.
46. **Keep the answer as short as possible with the information needed** – You're not going to lose points for adding too much, but you won't gain any either. Keep the answer as short and to the point as you can while still providing all of the information that's actually needed.
47. **Read the questions first then choose which to answer first** – Read through the prompts so you can decide which one to answer first. Each is worth the same number of points so spend your time on the ones you know to try and get more questions done rather than trying to get harder ones done.
48. **Don't leave any questions blank** – Don't leave a question blank. If you don't have a lot of time to answer it try to write whatever you can. A partial answer could get you partial credit, and that's at least going to be better than getting absolutely no points at all.

49. **Don't contradict yourself** – It's important that you continue the same line of thought on a question. If you contradict yourself, you're going to miss out on points. If you change your mind about something make sure that you cross it out entirely and then write something new.
50. **Write clearly** – If your handwriting is very difficult to understand or clarify you're going to lose points. You want to make sure that your handwriting is able to be read. Your reader is going to try and decipher the information, but you won't get points if they can't understand.
51. **Don't add extra information** – If you're asked for a set number of points you want to give only that number of points or that amount of information. You're only going to be scored based on the first answers that the reader comes to. If you're asked for 3 and you give 4 they will only look at the first 3, even if they're wrong.
52. **You're not required to go in order** – When it comes to a free response question you're not required to answer the questions in the proper order. You can jump around and answer the questions in whatever order you want without losing any points.
53. **Label graphs properly** – Make sure if you draw out a graph that you label everything. Title the graph and label each axis as well as any of the points that you need to make. This shows you know what you're creating and you understand the prompt as well.
54. **Include all proper units** – Make sure you have all the units marked correctly and that you're marking them right. If you don't use the units that are supposed to be included, you could lose points. If you don't use proper abbreviations or other markings for the units, this could do the same.
55. **Show all of your steps** – For any kind of math you need to make sure you're including all of your work. Show the steps you went through to get to the answer and make sure the reader can see where you're coming from and how you got there. You may get partial credit even if the answer doesn't turn out to be correct.
56. **Know your major themes** – The major themes in biology are going to be extremely important, and you want to make sure you can express them clearly. These are going to show up in your free response questions almost guaranteed, so make sure you know how they apply.

AP Biology Test Day Tips

AP Biology Test Day Tips

When it comes to test day you want to make sure that you're prepared and that you know what you're getting into. Make sure you follow through with these tips to keep you going and so that you don't get burned out before that big day. You want to make sure you're at your best when it comes to test day.

57. **Know when and where to be** – You want to make sure you know where your test is going to take place and that you know when it is long before that day. Make sure you even practice driving there so you know how long it's going to take and you know how to get there.
58. **Eat right** – Get a good breakfast before you go or eat something good at home. Make sure you have something to eat for a snack if you're going to need one during breaks and make sure you're prepared with a lunch for after your test. You don't want to be hungry while you're trying to focus.
59. **Get enough sleep the night before** – Getting enough sleep is going to help you maintain your focus and remember all of the information that you've been studying. If you don't get enough sleep, you could be tired or groggy when it comes time to sit down for the test.
60. **Take a break on studying** – The day before the test or even possibly a few days before the test take a break. Don't study on these days and give your mind a little time to process the information you've learned and to mentally prepare for the test that you're going to be taking.
61. **Be prepared for the day** – The day before, or a couple of days before, make sure that you have everything you're going to need for test day. That includes pens and pencils, your calculator, your snacks and anything else you might want to take along with you, so you're ready for anything.
62. **Double check your calculator** – Make sure your calculator has good batteries and that it's one that's acceptable for the test. You don't want to get there and find out that your calculator is not approved and you need to find something else or go without it.
63. **Have everything you need** – Make sure you have everything you're going to need in order to take the test. And make sure you also don't bring anything into the room that you're not allowed to have. You don't want to lose any of your belongings or be refused in for the test.

We hope that each of these 63 tips and strategies is going to make it easier for you to take your AP Biology test. Hopefully, they're going to make it possible for you to get the 5 that you're looking for and hopefully they're going to keep you prepared for any future AP tests that you might want to take as well. Make sure you're paying close attention to the things you write and that you're answering each of the different sections of a question, as well as taking an AP Biology practice test and learning more about how to pass AP Biology class.

AP Calculus Tips and Test Taking Strategies

 conquyorexam.com/ap-calculus-tips/

We're going to take a look at some AP calculus tips and test-taking strategies throughout this post so you can figure out what it's going to take to get a five on your test. After all, you've been putting in all that work in class, and you definitely want to get the benefits from it, right? We're going to look at everything you're going to need in this AP calculus BC review packet.

There are two different parts to this test, which include an AP calculus AB multiple choice and a free response question area. Within each of those parts, you'll actually find two different sections. One of the multiple choice sections and one of the free response sections will each allow you to use a calculator. One of each will not in this AP Calculus AB test prep.

You'll need to be very careful about how you study for this test because you need to not only know your formulas. You're also going to need to know quite a bit about how you can use your calculator to get there. In problems that you can use your calculator, you need to know how it's going to work and how to program functions.

The tests that you get for AP calculus are provided by CollegeBoard, and they use qualified proctors to grade all of the results. It's important to note that only things that are written in your answer booklet will actually be graded. The readers will not be given your test booklet.

If you're looking to get credit for your test from a specific college or university make sure you check their requirements so you can be prepared for the AP calculus exam answers. Some institutions require you to have higher scores than others with most requiring either a 4 or a five so this is the AP Calculus AB score distribution that you want.

With all of this information you should definitely be able to prepare yourself even better and you should be able to set yourself up for a good score. It's going to be entirely up to you to actually achieve the great score that you want, but if you have these tips you should have a head start over some of your fellow students.

At this point, let's take a look at this AP calculus AB cheat sheet with things you need to know so you can start preparing yourself for your test. Hopefully, each of these strategies is going to make it a little easier on you.

If you still need to find an AP Calculus study guide, read our guide to the **[best AP Calculus AB](#)** and **[AP Calculus BC review books here](#)**.

AP Calculus General Study Tips

General How to Study for AP Calculus Tips

Let's start with some of the general study tips that you should know. These are still primarily focused on the AP calculus exam; however, so make sure you're taking a look and putting these ideas into practice. The AP calculus test is a total of 3 hours and 15 minutes and consists of a 45 question multiple choice section and a 6 question free response section. For part of each section, you will be allowed to use a calculator and for part, you will not.

1. **Keep track of time** – The very first thing you need to do is know how much time you actually have and how you're going to use it. You need to make sure that you're always aware of how much time is left. That way you know you can actually complete the test.
2. **Get a quality graphing calculator** – Make sure you have a high-quality calculator that has graphing functions. A scientific calculator is not going to cut it anymore once you get to this test. You need to have a calculator that can take care of graphs.
3. **All questions are on one of three things** – Your questions are either about limits, derivatives or integrals. Just ask yourself which of these three things it's about when you look at a question you don't know. You'll have a head start on how to solve it.
4. **Study your calculator functions** – In order to do well on this test, you're going to need to know how to use the graphing functions and table functions of your calculator as well as how to calculate integrals, derivatives, and logarithms.
5. **Memorize your formulas** – The only way you're going to have all the formulas that you need is if you take the time to memorize them. This could take a while and require some hard work, but make sure you know all of them. You'll need them.
6. **Create a formula sheet** – Creating an AP calculus AB formula sheet can help you to study and practice the different formulas and gives you an easier way that you can actually memorize them.
7. **Know what the words mean** – If you don't know what the specific terms actually mean you're going to have a really hard time understanding the questions or answering them.
8. **Relax if you don't know** – If you get to test day and realize that there is a question you have no idea how to answer that's okay. The best thing you can do is work out the questions you do and then go back to it if there's time left (and don't leave it blank).
9. **Know your derivatives** – You're likely going to see a whole lot of trigonometric derivatives when you're taking this test so make sure that you pay attention to them when you're studying and that you memorize them.

10. **Check what's actually on the test** – You don't want to waste your time studying things that aren't even going to be on your test. Take a few minutes to look at what CollegeBoard says you'll be tested on and study that only.
11. **Practice problems** – You're going to need to be familiar and perfectly comfortable with the different concepts involved in your test. Make sure you're practicing plenty of the sample problems so you can get used to this.
12. **Know rules and how to apply them** – You need to understand all of the rules that go along with different formulas and different types of equations and you need to know how they actually work.
13. **Stay focused** – While you're studying and the day of the test make sure that you're staying completely focused on what's in front of you. Don't let anything around you distract you from what you're doing. With math this is especially important because you need to keep your numbers and formulas straight.
14. **Re-read the questions** – Even if you think you know what the question is asking to make sure that you read it through a second time so you can be sure. You may see something that you missed.
15. **Don't round before the end** – When you're working out a problem for either section make sure you're not rounding any of the numbers. You want to use the number exactly as it is until you get to the very end. At that point you can round if you need to, but only if you need to.
16. **Know Your Theorems and How They Work** – If you can't explain a theorem in the way you would explain it to someone that has never done it before you need to practice them even more.
17. **Know what you can and can't use a calculator for** – There are going to be some areas of the test that you can't use a calculator for. Make sure you know as much as possible about these sections so you can prepare to do them manually.
18. **Do not use calculator notation** – When you're writing out an answer or choosing an answer on the multiple choice section make sure you use the correct notation and not calculator notation which could lose you points.
19. **Know how to use your calculator** – There are sometimes multiple ways that you can get an answer to a question you're working on, but not all of them are going to give you the same answer or the accurate one. Know how to get the right answer. Make sure you practice with your calculator for different types of equations.
20. **The question book is not given to readers** – If you show your work in your test booklet, you're not going to get credit for it. You need to show work on your answer sheet in order for readers to see it.
21. **Never assume numbers or values** – If you're given a problem or a graph or a chart, you should never assume anything. You only know the value if it is given to you or if you use a given/correct equation to find it. Don't look at a graph and assume a point is at a particular spot.

22. **Use the proper units** – When you write out an answer or choose an answer make sure that it has the proper units associated with it. You can and will lose points if you forget to add them in.
23. **Keep your steps and answers organized** – The readers are going to be looking at a lot of tests, and it makes things difficult if they have to try and find the information they need to grade. Keep things organized to make it easier for them, or you could lose points.
24. **Do not simplify partial answers** – If you get to a partial answer make sure you're not simplifying anything. The partial answer should be your final answer.
25. **Set up study groups** – Study groups can make it a lot easier for you to study the information and to get help in areas where you might not be as strong. Just make sure to keep the group small so that it's manageable.
26. **Find your weak areas** – By taking practice tests you'll be able to determine the areas that you're weakest in and this will help you figure out what areas you should be spending more time on.
27. **Understand the graphs** – If there's a graph in the test make sure you know why it's there and what it actually represents. That's how you're going to be able to use it for the answer to your question or to do your equations.
28. **Know why you got questions wrong on practice tests** – Pay attention to whether you're doing equations wrong, using the wrong equation or not reading the question correctly when you get questions wrong. This will help you figure out how to fix the problem.
29. **Start studying as early as possible** – The best thing you can do is start studying for your test early so you can have as long as possible to actually go over the material and brush up on things you're not comfortable with.
30. **Use study books/guides** – Study books and guides are going to make it a lot easier for you to know what material is important and even which specific things are on the test. The AP calculus AB review book will mean a lot for your studies.
31. **Take short breaks** – On test day you're going to be doing a lot of writing. If you find yourself struggling because your hand hurts or you're just not sure how to keep going take a moment to close your eyes and just breathe and get back to it.
32. **Create your own schedule** – Setting up a study schedule is going to be an important part of the process and could help you to be fully prepared each day for what you're going to study and how long you'll study.
33. **Use flashcards** – Especially when you're working with formulas, you'll likely find that flash cards make it easier for you to keep track of how each one works and what they're each called or used for.
34. **Take practice tests** – If you haven't taken an AP calculus AB practice exam, you're definitely going to find yourself struggling when it comes time to take the actual test and everything it entails.

AP Calculus Multiple-Choice Tips

AP Calculus Multiple-Choice Review Tips

When it comes to the multiple choice section of your test you're actually going to have 45 questions. If you're wondering how long is the AP Calculus BC exam you'll have a total of 1 hour and 45 minutes to complete them. This is broken down into two sections. The first section is 30 questions where you will have 60 minutes, approximately 2 minutes per question, to answer without a calculator. Together these comprise 50% of your test score, so put some samples in your AP calculus AB review packet.

35. **No points removed for incorrect answers** – The old test used to count incorrect answers against you. This is no longer the case. You're not going to lose points for an incorrect answer so there is no reason that you shouldn't guess on questions that you don't know the answer to.
36. **Answer easy questions first** – Skim through the questions before you start working your way through the book. Start with the questions that you absolutely know or that you can find out the answer easily.
37. **Process of elimination** – If you don't know an answer or you're not sure how to figure it out wait until the end when you're low on time. At that point, use process of elimination to get rid of as many answers as possible and then make an educated guess.
38. **Simplify your answers** – If you can't find the answer that you arrived at in the answer options try to simplify your answer. You may find the answer once you do, but if you don't go back and check your math again.
39. **Fully develop the chain rule** – This falls under the category above about knowing your rules, but this is an especially important one. It's also one that you're likely to see more than once on your test.
40. **Make sure you've answered the question being asked** – Read through the question and make sure that you're answering the correct question as the answer to incorrect versions may also be there.
41. **Pace yourself** – Don't run out of time for each of the questions. Pace yourself and make sure you keep following your own time in order to get through everything.
42. **Don't overthink it** – The questions are generally not too difficult, which means you shouldn't overthink it or spend too much time going back over answers you already finished.

43. **Ignore your distracters** – There will be some answers that are thrown in just to throw you off. Make sure you can easily and quickly recognize these and that you can throw them out just as easily.
44. **Use official practice questions** – Multiple choice questions may seem like they would be simple but make sure you're using some official sources to find practice questions so you have a good idea what they'll be like.

AP Calculus Free Response Question Tips

AP Calculus Free Response Question Tips

The free-response section of the AP calculus exam consists of 6 questions total, which take 1 hour and 30 minutes. This is through two separate sections. The first section is only two questions and offers 30 minutes, which is a total of 15 minutes per question, and you are allowed to use a calculator. The second section is four questions with 60 minutes and does not allow you to use a calculator. Together, these are 50% of your total score.

45. **Practice old FRQ's** – The old questions are actually posted and available directly through CollegeBoard. You should definitely be looking at them because these questions are going to be a good idea of what you'll see on your test. These calculus practice test questions will greatly help you.
46. **Don't bother erasing** – When it comes to free response questions you don't need to waste time erasing an answer if you decide that it's not correct. You can cross it out, and the readers will ignore it.
47. **Watch out for linkage errors** – You want to make sure you're putting new equations on an entirely different line. Don't add on parts of an equation at the end of the previous equation. You'll end up marked down for showing your work improperly.
48. **Watch out for presentation errors** – When you write out your answer make sure that you present it properly and point out what the answer is supposed to be or what you've 'found.'
49. **Don't make them assume** – The reader of your test is not going to assume anything. If it's not written down, they have no idea if you know it or thought of it. Make sure you write out everything that is required to understand your answer.
50. **Get partial credit** – You can receive partial credit for questions that you answer. This can happen if you show the formulas properly, if you answer parts of the question and if you get the answer. Work for the partial credit.

51. **Start With Concepts You Don't Know** – When you're studying for this section you should start out with concepts that you already know you don't know or that you're not comfortable with. That's the top of your AP calculus AB study guide.
52. **Look at Sample Responses** – The company provides sample responses and show what the readers are going to be looking for so you can stick to these areas. It also lets you know more about the different ways to respond to a question.
53. **Once part b starts you can continue part a** – If you aren't able to finish part A of your test before the time ran out, but you finish part B early you can go back to part A. You won't be able to use a calculator at this point, however.
54. **No 'It'** – If you're referring to a specific number or to 'x' or 'y' or any other function you should never refer to 'it.' Always use the specific letter or designator when referring to anything in your statements.
55. **Read all the questions before you start** – Before you choose where you're going to start, you should take the time to read through all of the questions. This will help you to figure out which question you want to start with.
56. **Answer the question as asked** – You could find yourself adding extra content to what you're writing but this is only going to take up more time, and it's not going to help you get more points. Only answer the part of the question that you're asked to.
57. **Answer each part of multi-step questions** – There will generally be all multi-step questions so make sure that you actually answer every piece and that you label each one. This will ensure you get total credit.
58. **Label graphs and figures** – When you have to draw out graphs or figures make sure you label them, so there is no confusion among those who are grading your test what you're trying to say.
59. **Write to 3 decimal places** – Every answer that you write out should be filled out to 3 decimal places. This is a standard for the test so make sure you're not rounding or stopping any closer or you could end up with an incorrect answer.
60. **Show all work** – If you show all of your work you may be able to get partial credit even if you don't get the answer correct. This shows the reader that you know what you're doing.
61. **Write the equation** – This may seem like it goes along with showing all of your work but make sure that you don't skip over this part. It lets the reader know that you know how to start out and even if you make a mistake from here you'll at least get some points.
62. **Answer the parts you know** – If you don't know all the pieces of multi-step question make an educated estimate for the earlier sections and answer the later parts. You may be able to get at least some credit.
63. **Always write something** – If you aren't sure about the entire problem write out what you do know. If you know, some sections but not all then write them down. If you know the equation and the setup but you can't solve it still write it out. Partial credit is better than nothing.

64. **Mark the equation** – When you're reading through the question mark the equation if it's given to you. That way, when you get to working out the answer, you already have the formula or equation you need.
65. **Justify clearly in as few words as possible** – If you're asked to justify your answer you need to do so clearly but don't use too many extra words. You don't need to explain yourself too much.
66. **If you mark an answer, it's the only one considered** – If you circle or otherwise delineate that a specific portion of your content is the answer that's the answer as far as the reader is concerned, no matter what else is written on the paper.
67. **Don't simplify your answers** – In this section, you shouldn't simplify your answers. The answer is going to be as far as you're supposed to mark it down and you should avoid simplifying it too much.
68. **Double check** – If you have time, go back and check the answers that you have for the FRQ questions. Make sure you cross out any answers you decide are not correct and rewrite the correct answer.

AP Calculus Test Day Tips

AP Calculus Test Day Tips

When it comes to the actual day of the test you're going to need to go through a few different steps and processes to make sure that you're fully prepared and ready to go. So there's no easy answer to how to pass calculus without studying or how to pass AP Calculus AB class. You're going to want to keep yourself comfortable and definitely make sure that you're not going to miss out on anything.

69. **Get Plenty of Sleep** – Getting sleep means that you're going to be focused and you're going to be wide awake when it comes time for the test. You'll be able to pay attention to each of the questions and you'll have no problem getting through the whole day.
70. **Relax the Day Before** – Take some time off the day before your test rather than trying to cram anymore. You're not going to be able to remember anything else this late in the game anyway.
71. **Lay out what you need** – Make sure that you pack everything you're going to need the day before the test. That means lay out the clothes you're going to wear and pack up your pens and pencils, your calculator and anything else you'll need.
72. **Know Where to Be and When** – Make sure you check out where you're supposed to be down to the room number and make sure you know what time you're supposed to be there.

73. **Make Sure Your Calculator is Approved** – Not every type of calculator is going to be approved so make sure that yours is before you get to the test day. You do not want to have to walk in without a calculator at all.
74. **Have extra calculator batteries** – Have extra batteries for your calculator. If anything happens, you definitely don't want to be left without a calculator to help you along where you can use it.
75. **Take breaks** – There will be breaks during the test. Make sure you take advantage of them and use them as well as you can. You'll be able to get further along and feel more focused as you take the test if you just take a few minutes to breathe.

Hopefully, each of these tips is going to make it a whole lot easier for you to get a great result on your AP calculus test. Making sure you have a great quality calculator, paying attention to the question and what it's asking and making sure to answer all part of the question is definitely going to help you along and make sure that you're getting as many points as possible when you sit down for your test. And don't forget to start with an AP calculus AP practice test.

AP English Language Tips and Test Taking Strategies

 conquereyourexam.com/ap-english-language-tips/

Throughout this post, we're going to look at AP English Language tips and test-taking strategies to help you get that 5 on your test. We'll look at each of the different sections, including multiple choice, analysis, synthesis, and persuasive or argumentative essays. These AP English Language last minute tips will hopefully help you along the way to getting the score you want.

This test is different from the AP English Literature and Composition test, so make sure that you're choosing the right one to start your studying. You want to make sure that you are studying the right topics with this test focusing on analysis, vocab, grammar and the like.

Overall, this type of test is going to focus on the necessary information related to how to survive AP lang and whether you fully understand it. This is then used by colleges to determine whether or not you will receive college credit for already taking the courses.

Each of these tests is supplied by College Board, and qualified proctors grade the results. Students who take the test must achieve different scores to receive credit from the institution of their choice. Most schools will require either a 4 or a 5 in order to receive exemption and may have separate requirements to receive credit.

Hopefully, these AP English Language tips and test-taking strategies are going to make it easier for you to get the score you want and make sure you get the waiver you're looking for. We'll take a look at different methods that have been used by AP English Language students and see what's worked to help them get a 5.

General How to Study for AP English Language Tips

The AP English Language test is a total of 3 hours and 15 minutes. This includes 2 separate sections, with a multiple choice section that consists of a 1-hour block of time and an essay section which consists of 2 hours and 15 minutes. We'll start by taking a look at some of the

more general AP English Language tips when it comes to this test, so you can make sure that you're prepared overall for what this test will require.

1. **Read a lot.** In order to learn everything that you need to know about this test, you're going to need to read a lot. Reading is going to make it easier for you to read through the passages that will appear throughout the exam and also to answer any of the questions because you'll be better and developing an understanding of what the author is saying. This also helps you with understanding vocab.
2. **Practice College Board test questions.** College Board is the ones that actually create the AP English Language test in the first place, which means they know pretty well what it takes to get a good grade. They also know exactly what the questions are going to look like so taking the time to go through some of their test questions are going to make it a whole lot easier for you to understand what your actual test is going to look like.
3. **Read sample responses.** Just like you want to study some of the questions that you might find, you also want to make sure that you study the responses. The ones that you can find on College Board are also going to make sure that you know what scores well and you have an inside track on how you can make all of your answers fit the criteria that they're watching for.
4. **Make flashcards with vocab to study.** Vocab is extremely important so making flashcards that you can keep with you at any time and study is going to be important. It's also a super simple process. The cards are primarily going to be about memorization, which can be a lot simpler than trying to understand complex strategies. Of course, you'll need to learn those too, but this is a good starting point.

AP English Language Multiple-Choice Tips

AP English Language Multiple-Choice Tips

The multiple choice portion of the test consists of 50-55 questions which are related to approximately 4-5 passages of text. You get a total of 1 hour to take this portion, which means a little over 1 minute per question and it's going to count for a total of 45% of your overall score. That means it's the highest percentage and it's an area you should evaluate carefully, especially as there's no specific subject matter for you to prepare. Take a look at these AP English Language MC tips.

5. **Find the best answer, not just the right one.** When you read through the answers to a question, it's possible that more than one of the answers will actually fit the question. Your job is to find the answer that best fits the question. This may mean taking a closer look at the answers and the question before you choose the one that seems to work best.
6. **Read to understand the passages.** Make sure that you actually fully understand the passage that you're looking at. If you don't understand it, you need to read through it again and try to be more careful. If you don't understand the passage, you're not going to be able to answer the questions accurately, and this will affect your score for the multiple choice section.
7. **Look for a purpose or claim from the writer.** In many of the passages that you read you're going to be required to look for the purpose of the passage or the claim that the writer is making. Whether this is accurate or not, factual or not or anything else, this is the purpose of the passage itself, and that's the only thing that matters. Make sure you pay attention to what the writer is trying to get across.
8. **Use annotations as you read to prepare for the questions.** While you're reading through the passage, you should be making annotations that reflect the key points or specific things that seem important. If you want more tips like this, you can also check out this video to find out even more about some of the tips and techniques that are out there.
9. **Read the description at the top of the passage to get more context.** The description that's given at the top of the passage is going to provide you with a little more information about what the passage is about. It could tell you who wrote it, what piece of work it came from, where it's taking place or anything else that can give you a bit more foundation about what you're reading and what you should expect to find when you do.
10. **There are 4 different types of questions.** These are, analytical, factual, inferential, technical. Each type of question is going to require a slightly different type of answer, so you want to make sure that you're reading the question carefully and looking for any keywords that might tell you what type of question it is.
11. **Pace yourself on each of the passages and questions.** Our best AP English Language and composition multiple choice tips are these. You are only going to get a set amount of time to finish the entire series of multiple choice questions. On average, it's only 1 minute per question, so try to balance your time as close to that number as possible. Some questions may be easy, and some may take a little more time. If you find you're getting close to the end of the time limit and you have a lot of questions to answer it's time to start hurrying a little more.

12. **Locate the pre-1900 passage first and save it for last.** This is the hardest set of questions usually so you should save it to make sure you have time to answer more questions. It plays right into your AP lang multiple choice strategies. All of the questions give you the same number of points, so if you can get twice as many of the other questions done as you would in this section during the same amount of time you're already going to be ahead of the game.
13. **Answer all of the questions in three phases.** The first thing you should do is look for any questions that you know. These are the ones you want to answer first because they take the least amount of time. From there, start eliminating incorrect answer choices from the questions that you don't know immediately. Once you've done that if you still aren't sure what the answer is, make an educated guess based on the remaining answers.
14. **If you run out of time find the shortest questions first.** Look for specific line questions as well as those that are self-contained and don't reference anything. These three types of questions are going to be the easiest ones for you to answer in a short amount of time. You can quickly read the question, find the answer and fill in the bubble, so you can move on to the next question. Work your way up to the harder questions if there's time left.
15. **Stick with 1 letter response for any questions you don't have time to answer.** If you don't have any time to answer all the questions just fill in a single answer bubble for all of them. Picking random answers very rarely allows you to get lucky. If you pick just one letter, usually either B or C and fill in all the answers you don't know with it you will have a higher chance of getting more of those questions right.
16. **Write a quick summary (a sentence) for each paragraph as you read.** As you read each passage, try to sum up the paragraphs with a single sentence in the margins. This makes it easier for you to go back when you're looking at the questions and see what the answers are or to better understand where you might find the answer. If one passage talks about the subject of the question your summary will tell you where to look.
17. **Write a larger summary (a couple of sentences) for the passage when you're done reading.** When you're finished reading the entire passage write down a couple of sentences that will sum up the entire thing. This will help you with any questions that want to know more about the main point of the passage or what to know what the author's intent was. You'll have a general idea already laid out and ready to go.
18. **Read the questions first.** Reading the questions first means that you already know what you're looking for when you start working your way through the passage. It means you'll be able to more easily and more accurately pick out the information that you need and you may be able to get through that section of the test more quickly. That's definitely going to be an important point when it comes to balancing out your time and making sure that you're able to answer all of the questions in the time allowed.

19. **The answer is always in the text.** Focus on what the passage says, not what you think it means. It's easy to get caught up in what you think the author is trying to say or how you think they're trying to express something. Instead, focus on what the question asks and then on exactly what the passage tells you. The answer is in there, so if it seems like you can't find it, you may be reading either the passage or the question incorrectly.
20. **Incorrect answers do not count against you.** There is absolutely no penalty for guessing. That means you should never leave a single answer bubble blank. Even if you have absolutely no idea what answer it is you will have a 25% chance of getting it right. If you decide not to fill in something because you're not sure you have a 100% chance of getting it wrong. Why would you want to risk that?

AP English Language Essay Questions Tips

AP English Language Essay Questions Tips

There are a number of AP English Language tips and test-taking strategies that you should know all about when it comes to all of the essay questions. These tips will help you understand some of the facts that go into the entire section, which you're going to have 2 hours and 15 minutes to take in total. You'll want to make sure you pay close attention to how each section requires you to look at the passages you're provided on and how to write AP lang essays.

21. **Practice essay question types.** The first thing you should do is to make sure you're practicing each of the different types of essays. You should know how to analyze, synthesize and argue based on various passages, both fiction and non-fiction. You should be able to take any source of information that you're provided and write a cohesive and well-defended argument on one side or the other.
22. **5 paragraph structure is not required.** While you do have to pay attention to some of the underlying factors of the English language, like sentence structure, grammar, and spelling, you do not have to pay attention to the standard 5 paragraph structure that is most common for essays. You can write things out in any organizational structure that you want, and you can write fewer paragraphs as well.

23. **All essays are considered drafts.** The people grading your test consider these essays as drafts. What that means is they expect that there may be additions made throughout and that words may be crossed out or rewritten. They also expect that things may not be in the exact right order. This is important because it means you don't need to worry about outlining and then trying to write your essay in too formal a manner.
24. **Showcase evidence of thought and control of the English language.** The primary goal of this type of essay is for you to exhibit that you know what you're talking about. You should be able to express that you fully understand what you read and that you also have a good knowledge and basis of the English language. From there, your essay should adequately reflect the prompt that you've been given.
25. **Address counterarguments as well.** Make sure to address a counterargument or a couple of them through the course of your essay. You can defend your point in reflection of these counterarguments, and you can use them as concessions as well, but they help to show how you have analyzed the information.

AP English Language Literary Analysis Tips

AP English Language Literary Analysis Tips

The literary analysis or rhetorical analysis portion of your AP English Language test is going to be a complex one because it requires you to analyze everything about a specific passage to figure out the purpose according to the author. This essay requires you to really explore what the author says and what they mean in the context of the passage that you're looking at. It can be complicated, but it should take approximately 40 minutes to write this essay with these AP English Language rhetorical analysis essay tips.

26. **Must know literary vocab.** You should know a great deal of literary vocab. This includes things like antecedents, hyperbole and sentence structure. These terms are going to help you create a better AP lang rhetorical analysis of the material that you're given and will allow you to showcase that you know what you're talking about and what you're actually reading. You must exhibit full knowledge of these words.
27. **Usually nonfiction.** The piece that you get will usually be non-fiction, but that's not always the case. You should be prepared for different types of works, and you would be better off preparing by studying both fiction and non-fiction pieces for this type of analysis. You'll likely find samples of both forms by looking at some of the best websites for study questions, including College Board.

28. **Analyze the author's work.** Generally, you're going to be required to analyze the work that the author has written for structure, purpose, and style using rhetorical strategies. You should know how to accurately locate each of these elements and express them to someone else. The person grading your test should be able to tell that you fully understand what the author is saying and what they meant to convey through the piece.
29. **Use textual evidence.** Use information directly from the piece in order to back up your analysis. You can use quotes, specific words and phrases and more, just make sure that you reference the passage and that fact that you are quoting from it during your response.

AP English Language Synthesis Tips

AP English Language Synthesis Tips

In this portion of the test, you're going to be given 6-7 different passages to read, which could include poems, quotes, passages, images and more. At least one of the documents is going to be an image of some type. You will then be required to use at least half of those documents to synthesize the information you're given into an answer to the prompt. This portion of the test is recommended to be 40 minutes as well, plus 15 minutes for reading the text. Make sure you review these AP English Language synthesis essay tips too.

30. **Given documents that you must use.** For this section, you're going to be given the specific documents that you're required to use. There may be several documents provided, and you will be told how many you need to reference when you're writing. Make sure you use the correct number of documents when supporting your point or you will lose points.
31. **Have an argument before you look at documents.** Read through the question or prompt that you are given and decide your point of view before you even read the documents. You want to write your essay based on what you know best and use the documents as a background of information to support or defend yourself. If you read the documents first, you could end up struggling to figure out which viewpoint to write from.
32. **Make sure to be persuasive with your argument.** Your essay is supposed to be at least somewhat compelling. You are attempting to make a specific point, which means you should be focusing on just how to make that point. You should also be considering and paying close attention to how you can get someone else to agree with your point or at least see where you are coming from.

33. **Annotate the text/documents.** While you're reading, you should be annotating the documents that are provided so you can reference them easily when you start writing. You want to be able to find the most important passages and areas where you can use information. If you already know the point you're going to make it will be even easier to locate the relevant points as you read the passage.
34. **Use quotes and attribute to them.** Using quotes from the text shows that you've read it carefully and that you understand it. You should use quotes to back up specific points and make sure you show how that quote really helps you to explain something that you believe backs up the main argument.

AP English Language Argumentative Tips

AP English Language Persuasive or Argumentative Tips

The final portion of the essay section is about writing an argumentative essay with AP lang argument prompts. You will be given a single passage, and your responsibility is to take the information and create a point of view. You can choose any side that you want, and you can actually decide to pick neither side as well. Just make sure that you back up your point as well as you can using information from the passage provided. That's the best advice we have for you in tips for AP English Language argument essay.

35. **Understand the nature of the position taken in the prompt.** There will be a specific argument or stance taken when it comes to the prompt you are given. You must understand what that stance is so you can decide how you are going to respond to it or what your opinion is going to be when it comes time to write the essay.
36. **Take a stand.** Decide what your position is going to be when it comes to writing the essay. You'll want to read the prompt carefully so you can see what the point of it is and what the topic is overall. It could be something basic or something highly argumentative. Your job is to decide what side of the issue you want to come across on and to write in defense of it.
37. **Clearly and logically support your claim.** Make sure that you are clear and logical when you state whatever it is that you want to point out. The person grading your essay should easily be able to figure out what your stance is and they should be able to understand how you reached that stance or why you feel that way based on the information that you provide.

38. **Agree, disagree or qualify.** You are allowed to qualify your answer, which means that you can agree with some of the viewpoints of both sides of the issue. You are not required to choose to either agree or disagree. Just make sure that you are clear about your points and about which areas you agree with and which ones you don't to make your stance clear. This is one of the best AP lang argument essay tips.

AP English Language Test Day Tips

AP English Language Test Day Tips

If you need some last minute AP English Language and composition writing tips, here goes. When it comes to the day of the test you have to make sure that you're taking care of yourself and preparing to the best of your ability. This is going to be an extremely important day and all the AP English Language tips, and test-taking strategies in the world aren't going to help you if you don't know how to prepare on that very last day. These tips are going to make it easier for you to be at your best and make sure you can perform well.

39. **Eat a good meal.** Eating a good meal is crucial because it's going to keep you full and better focused. If you're hungry, you may struggle to pay attention to the questions or the passages, or you may be slowed down. This could lead to you not finishing the test in time or making mistakes that you wouldn't otherwise.
40. **Don't study.** It may seem strange to not study the day before and the day of the test, but this is extremely important. Cramming right before a test can actually make it more difficult for you to remember the things that you're supposed to know. Whatever you know going into things the day before is going to be all you know at the end. So don't try to cram at the end.
41. **Get a good night's sleep.** Getting plenty of rest is going to be a lot like eating right. You want to be rested and refreshed to make sure you can perform at your best. If you're tired you might struggle to remember things that you knew and you might have difficulty finishing the test in time. Sleeping for at least 8 hours the night before the test can definitely help you feel better prepared going in.
42. **Bring everything you need.** Make sure you know everything that you are expected to bring and make sure you have it with you. You will likely need your own writing utensils (and you should know what kind are approved) and you will likely need some type of identification. Make sure you have a complete list of everything that's required and that you bring only the items that are on the approved list. Bringing other items may mean you are disqualified or not allowed to take the test, and not having the right items may mean you're not prepared to take the test.

43. **Know when and where to be.** You should make sure you know exactly what building and what room your test is in long before the test day comes, but make sure that you verify this information in the days leading up to the test. Locations can sometimes be changed last minute, for just about any reason. You don't want to show up at the wrong place. Plus, make sure you know when the test starts and try to get there as soon as the doors open. This makes sure you aren't late and don't miss your chance.

AP English Language Review Videos & Resources

Recommended AP English Language Review Videos and Resources

You want to know how to pass an English language exam, and these resources are going to make it even easier for you to practice because they provide you with the information you need to know as well as examples of what the test itself is going to look like. You can take as many practice tests as you want too, so you'll know how to pace yourself and more come test day.

44. **College Board practice tests and questions.** College Board is responsible for the test itself, which means they're the ones who know the most about what you need to know. By taking a look at their practice tests and questions you're going to have the best AP English Language tips and test-taking strategies that you possibly could. Not only that, but you're going to be able to get an inside look at what your test may look like.
45. **Find the right AP English Language review books.** If you're looking for the right material to study then you definitely want to make sure you have the right study books. There are plenty of them out there, so make sure you know which ones you need.

Hopefully, these 45 tips are going to make it a lot easier for you to figure out how to prepare for the AP English Language exam. These AP English Language tips and test-taking strategies should tell you what is most important and how you can get a better grade. Things like reading the questions first, making sure you understand the question and the passage before choosing an answer and using the right references are extremely important and make sure that you don't lose points for a silly mistake.

AP English Literature Tips and Test Taking Strategies

 conquyorexam.com/ap-english-literature-tips/

We've compiled these AP English Literature tips and test-taking strategies so you can learn more about how to excel. You'll learn about how to get a 5 on your test throughout the different sections, where we'll talk about everything from general study tips to the multiple choice section and each of the essay sections.

Anyone who has taken AP courses wants to make sure that they're getting credit for them and you'll be able to do that quite easily with the right AP literature study guide. Make sure you're in the right place, however. This review is for the AP English Literature test, not the AP English language and composition test.

This test is hosted by College Board, which also provides a range of materials and practice tests and questions that you can review to get even more information. The test itself measures your comprehension of the topics that you've found within this course and helps colleges determine if you should be given credit without taking a future college course.

Each college determines what score is necessary in order to avoid taking one of their courses and there may be different requirements for waiving courses versus getting credit for them. Most colleges, however, will require at least a 4 and possibly a 5 in order to get any kind of recognition.

If you know where to look for the help, you'll find that you can figure out how to pass a literature exam with no problems. We'll take a look at some of the best tips we've found right here to give you the AP literature skills you need.

Looking for additional resources? **[Check out our guide on the best AP English Literature review books here.](#)**

General How to Study for AP English Literature Tips

There are a number of different general AP English Literature tips and test-taking strategies that are going to make it easier for you to study for this literature test. Each one is going to focus on some of the simple things that you might think you'd easily remember, but it's those things that are the easiest to forget. In total, the test will take 3 hours, with 1 hour devoted to the multiple choice section and 2 hours dedicated to the essay questions. In total, this covers 58 questions (55 multiple choice and 3 essays).

1. **Hone your critical reading skills.** In order to succeed in this test, you're going to need to have some strong critical reading skills among your AP English Literature tips and test-taking strategies. That means you need to be able to read through something and analyze it to understand all of its many parts and what the author was attempting to get through when they wrote it.
2. **Know how to break down characterization.** You'll need to know how to break down all of the different parts of a written piece, whether a piece of prose or a piece of poetry so that you can accurately and thoroughly explain everything that the author has done.
3. **Understand the elements of poetry.** Knowing the different elements related to writing poetry of all different types is essential, and while it can be difficult, you'll want to research how these elements work together and how they go into creating a poetical work.
4. **Read out loud.** Reading out loud can allow you to really absorb the information because not only are you gathering it in your mind but you literally hear the words as well. This gives you two different parts of your body that are gathering the information and makes it more likely to stick long term.
5. **Consult a dictionary for terms.** The various terms and elements associated with any kind of written work can be significant on this type of test so you'll want to look closely at what their literal meanings are and make sure that you understand how they apply in different situations so you can use them correctly in defense of any topic.
6. **Find the best AP English Literature review books.** Make sure you check out some of the top review books out there so you can make sure you're getting a good understanding of the material that will be covered.

AP English Literature Multiple-Choice Tips

AP English Literature Multiple-Choice Tips

The multiple choice section of the literature test covers a total of 55 questions and offers 1 full hour to answer them. This means you have a little over 1 minute per question, so you're going to need to move quickly with your AP English Literature tips and test-taking strategies in place in order to get through everything. It also counts for 45% of your score, which means you'll need to score well on this section in order to get the 5 you're looking for on your full test. Check out the AP literature multiple choice tips here.

7. **Practice test questions from legitimate sources.** These AP English Literature tips and test-taking strategies tell you not to just pull practice questions from anywhere. A lot of different websites and sources will claim that they have practice tests, but you want the ones that are from legitimate sources like College Board. These are actually going to prepare you for what the test will cover and what it will ask you.
8. **Identify the reasons that you've missed questions on your practice.** When you do practice tests take a look at what AP literature multiple choice question types you miss most frequently. Are they all a specific type like inference questions or analysis questions? If they are then, you'll want to spend a bit more time studying those particular types of questions to get better at them.
9. **Annotate the passage.** As you're reading, make sure you annotate the passage and make notes about what's happening or what the main points are. You can write in your own notes or use boxes, circles, and stars or your own methods to highlight specific sections of the passage as you're going through.
10. **Take notes on the passage.** Taking notes means making sure that you understand each section of the passage and that you understand the passage as a whole. It allows you to go back after you start answering questions and figure out where you need to be looking in order to get the right answer.
11. **Read all the words to know what the question is asking.** If you skim over a question or you don't read it quite right, you could actually end up missing the entire point of the question. That means you could get the answer wrong even when you would have known the right answer. Read each word to make sure this doesn't happen to you.
12. **Double check the context for any question that references a line or passage.** If you get a question that references a specific line or passage make sure you go back and double check your answer. Even if you're sure you know it you'll only spend a couple of seconds reviewing and that couple seconds could mean getting a question right that you would have missed.
13. **Make an educated guess.** If you don't know the answer to a question, your best option is to make an educated guess. You don't get penalized for having any wrong answers, so if you can narrow it down pick between the few options that are left and see what you can get. Even a 33% chance is better than no chance at all.

14. **If an answer is partly wrong, it is entirely wrong.** If a single portion of the answer is wrong, the entire thing is wrong. You may feel like you're getting tripped up by an only half-right answer. If any of it is wrong that means the whole thing should be thrown out, so make sure you cross it out and ignore it.
15. **The flashy answer isn't always right.** How often do you see questions where a couple of answers look long and fancy with big words, and then one of them seems way too basic? Well, those simple answers are right sometimes, so don't discount them just because they seem too simple. Find out more about this right here.
16. **Read prose also for word choice and analogy.** Often we read prose for overall meaning and context, but you should also read it for word choice and analogies. You may find connections that you wouldn't otherwise, and there may be questions that relate to why an author chose a specific way of saying something.
17. **Read poetry also for overall meaning.** Read through line breaks. Poetry is often read in a more stilted fashion, but you can miss the overall meaning if you don't read through the line breaks once in a while. Make sure you're paying close attention to the over-arching aspects of any poem.
18. **Research literary terms.** If you don't know your literary terms, like hyperbole and antecedent, you're setting yourself up for problems. You could be asked to define these words or to locate them in a passage. Make sure you research as many as you can. Maybe create flashcards that will help you practice what they mean.
19. **Questions with multiple passages treat as true/false.** If you get questions that offer several passages and ask you which ones express "x" or which ones are facts or anything at all read the question first, then the passages and then the answers. Don't read the responses until after you have read the passages and decided which ones fit or you could end up with the wrong answer.

AP English Literature Essay Tips

AP English Literature Essay Tips

There are some specific AP literature essay tips that you should understand for each section of the essay portion of your test, but there are also some critical general comments we'd like to go over. These will help you better understand what all of the essays should consist of and how they need (or don't need) to be structured in order for you to get the full credit that you want on your test. You'll have approximately 40 minutes for each essay, but this is actually grouped together as 2 hours, so you get to decide how you spend the time.

20. **Write legibly.** The people responsible for grading your test are going to try their best to read your handwriting, but if they can't, it could mean that you lose points even when you had the right information. You want to write as clearly as you can so it's easy to read and easy to see that you have everything in there.
21. **Show organization by using paragraphs.** Putting all of your writing into a single block is definitely going to be a problem, and it's going to look like you don't understand paragraphs or sentence structure or a lot of other crucial English language features. Putting your writing into paragraphs also makes it easier to read and easier to understand.
22. **You don't need to write a 5 paragraph essay.** Just because this is an essay doesn't mean you need to write a full 5 paragraph essay as your AP lit essay structure. The standard system is out the window here, and you can write something shorter or combine some of the paragraphs and sections into smaller sections to cover the information needed.
23. **Don't restate the prompt.** Jump right into expressing your point and what you're trying to argue instead of using the prompt to lead in. The person grading your test already knows the prompt, and they don't need you to recap it for them. This is an important one of our many AP English Literature tips and test-taking strategies when it comes to saving time.
24. **You won't have time to outline.** There isn't a whole lot of time for any of these essays, and you want to make sure that you can get through them all. That means you won't have the time to draft a full outline and then write up your essay in that formal style. You'll need to freeform your thoughts and ideas into a cohesive structure as you go along.
25. **Put a thesis statement somewhere in the essay.** Somewhere in the essay should be a thesis because you need to have a point to what you're trying to say. You're going to focus on the specific aspects that the prompt asks you for, but that's going to require you to have some type of purpose behind it.
26. **Answer every portion of the prompt.** Make sure you read the prompt carefully so that you can answer every piece of it. If you miss a section of the prompt in your answer, you will lose points. Answering every piece is going to give you a better chance of getting a higher score.
27. **Don't summarize the passage.** Don't include a summary of the passage. The person grading your test knows what the passage says, and all you're doing is using up space and time that you could be using expressing your point. Make sure that you keep any descriptions you do need to make as short and sweet as possible.
28. **Use quotes for analysis.** Quotes are a great thing to add in because they let the reader know that you were paying attention and that you understand the purpose of the passage. Those quotes should be used in an analytical form rather than just being repeated into your text.

29. **Take notes as you read.** While you're reading, make sure that you jot down a few notes that will relate to your prompt or notes about some of the most essential points that are being shared. These will help you when it comes time to write the essay, so you don't have to go through and reread the entire passage again.
30. **Understand the principal idea of the passage.** You should know what the purpose of the passage is. Is it trying to tell you something? Is it trying to convince you of something? If you've finished reading it and don't know what the author is trying to convey, then you need to go back and read it all over again.
31. **Practice writing each style of essay.** Get some practice with each of these styles of essays. You want to be comfortable with the rules and the way each of them is written so that you can write them more quickly when it comes to test day. The more comfortable you are, the better you'll be able to get everything out without taking too much time. You'll also want to look at AP lit essay examples.

AP English Literature Open Question Essay Tips

AP English Literature Open Question Essay Tips

The open question essay gives you the most freedom when it comes to any sort of essay question on this test. You actually get to prepare before you even get to the test and you'll have plenty of options for what you want to prepare as well. You'll have a total of 40 minutes to take this portion of the test, which will be enough if you're careful, structured and well prepared. Make sure you know how to write an AP English Literature exam essay before you get in there. This is going to give you an edge on your overall score for the test because you can prepare as long as you want.

32. **Choose books you've read in their entirety.** Don't choose books that you've only read small (or even large) passages of. Make sure you've read each of them entirely so you can analyze even the small details and really get in-depth when you're trying to express how the book relates to the prompt.
33. **Know which books you're going to use before you get there.** Choose the books you're going to use before you get to test day. This allows you time to read through them again, study your notes on the main points and be fully prepared for how you're going to approach the test question on the day of the test.

34. **Have 2 main options and something completely different as a backup.** You should have at least 3 books fully prepared for test day. Two of them could be your favorites or ones that you enjoy best, even if they're very similar (similar time period, same author, etc.). The third book should be entirely different, in case you get a prompt that will be difficult to answer with one of your favorites.
35. **Know the most critical scenes for each book you choose.** Being unable to describe the pivotal scenes in your book is not going to help you in getting a good score. You should have an excellent understanding of what happened, how it happened and even why it happened. All of these details are going to help you in answering whatever the prompt may be.
36. **Reflect specific details from the book into your answer.** Using small details and information that isn't as well known or would require careful reading will prove that you've read the book and that you fully understand what's happening in the story.

AP English Literature Poetry Essay Tips

AP English Literature Poetry Essay Tips

This section of the test is going to consist of either 1 or 2 short poems that you'll need to carefully analyze and evaluate in some way to answer the prompt. You'll have a total of 40 minutes in which to use your AP English Literature tips and test-taking strategies, so make sure you're reading carefully, evaluating the poems and then answering the prompt wholly and concisely. Make sure you're comfortable with reading and understanding different types of poetry before you get to test day.

37. **You must be perceptive and persuasive to get the highest score.** The highest score, either an 8 or a 9, requires that you be perceptive and compelling. You need to be able to detect even the smallest details and information, and then you need to be able to convince the reader of your opinion related to that topic. Otherwise, you're not going to be able to get this best score.
38. **Grammar is very important.** You're writing an English essay, so it's likely no surprise that the grammar you use is essential. Try to remember your sentence structure, your parts of speech and definitely your commas. You'll also need to remember things like spelling and paragraph structure. By writing with proper grammar, you're going to have a better chance of a higher score.

39. **Use quotes within your essay.** Read through the poems you're given carefully and then make sure that you use specific quotes from those poems in the essay that you write. This shows that you're genuinely analyzing the text and that you understand what is being said. It also shows how you can interpret the literal into more broad context.
40. **Don't use vague statements.** Vague statements make it sound like you don't know what you're talking about or like you're filling up space with empty information. You definitely don't want to be a space filler, so make sure that you use specific quotes, specific statements, and as much background information as you can.
41. **Keep the introduction and conclusion short.** The introduction and conclusion are essential but not as important as the other information that you're trying to get across. If there's not a lot of time, these are the sections that you can take less time with. Keep them short and simple, and you'll have more space for everything else, like the evidence in the next point.
42. **Be organized and use plenty of evidence.** Keeping your essay organized makes sure that your point gets across easier. Using evidence makes sure that the reader understands where you're coming from and can see that you understand the context and everything that's happening in the poem.

AP English Literature Prose Essay Tips

AP English Literature Prose Essay Tips

The prose portion of the test will require you to use your AP English Literature tips and test-taking strategies to evaluate a single passage carefully. You'll have a total of 40 minutes to complete this essay as well. Once again, being careful to read through the passage and the question entirely and making sure you manage your time well will help you to complete this essay on time and will make sure you're fully prepared. You also want to keep an eye on your structure to make sure it fits what you're trying to say.

43. **Evaluate the overall meaning and break down the elements of the passage.** When you read the passage, you want to look at what the entire thing is trying to get across and then you want to break it down into smaller sections so you can understand each component. This will help you when it comes time to write your essay and evaluate what it's all about.

44. **Annotate the passage as you read.** If you make notes and annotate while you read you're going to have an easier time of writing your essay later on. You'll be able to skim back through your notes instead of rereading the entire text, and then you'll be able to spend more time writing and less of your time trying to read through more of the text, a second time.
45. **Fully defend and explain your thesis.** Make sure that your thesis is well thought out and that you express it, so the reader knows exactly what you're trying to say. You should also defend it with as many points as you possibly can so that it's clear you read and understood the passage that you're using in your essay.
46. **Get in-depth with your evaluation.** Getting very in-depth with your analysis shows an understanding of literature that will reflect well on your score. You want to make sure you show the reader that you can understand the literal as well as some of the more abstract concepts associated with the piece.

AP English Literature Test Day Tips

AP English Literature Test Day Tips

When it comes to test day you want to make sure you have the right AP English Literature tips and test-taking strategies to get you prepared and ready for anything that might come your way. This means making sure you're going to be healthy, confident and ready to do your best so you can get the credit for all the hard work that you've put in. An AP test is going to be difficult, but if you know how to prepare yourself beforehand, it doesn't have to be as difficult for you as it might for others.

47. **Eat a good meal.** Eating right is always going to be an essential step. You want to make sure that you are full and that you are comfortable when you're taking your test because getting hungry is going to set you up for trouble. If you're hungry, you'll have a harder time focusing on what you're supposed to be doing or on the difficult task before you.
48. **Don't study.** Studying immediately before a test, cramming as most people call it, can actually cause you to forget more than it helps you to learn. That means you could be setting yourself up for trouble and you may find that you struggle even more with trying to remember what the main points are. By skipping studying for at least a day before the test, you give your mind time to really store that information you're going to need.

49. **Get a good night's sleep.** Getting plenty of rest is essential because it helps you be more focused when you sit down at that desk for the test. If you're tired, your brain will have a hard time remembering information. You may have a lack of concentration. You may struggle even to write, and you may feel like you're groggy or 'out of it.' None of these things are going to help you get the grade that you want on your test.
50. **Relax.** Taking a few minutes to sit back and relax is going to help you calm down and mentally prepare for what you're going to be doing. Those 3 hours are going to feel entirely too short, so you want to be ready for them.
51. **Bring everything you need.** It's important to remember everything you're going to need in order to take the test. Keep in mind that you won't be able to take the test if you bring any materials that are prohibited and you may not be able to take the test also if you don't bring all of the necessary materials. You are responsible for going over the list of items you can and can't have and making sure that you do what you're supposed to.
52. **Know when and where to be.** Make sure you know when you're supposed to be at the testing center, including what time the test starts and what time the doors open. You want to be there as early as you can so you can be sure to get in, get a seat and relax for a little while before the test begins. You'll also want to make sure that you know exactly where the test is being held, including the physical address and the specific room. This information should be verified long before the test date and again just before the test date so you can be sure nothing has changed.

Hopefully, these 52 AP English Literature tips and test-taking strategies are going to help you when it comes to taking the AP exam. You want to do well, and that means you need to keep in mind things like specific vocab and literary terms, using quotes and annotating the passages as you go through them. These tips are going to help you write better, and they'll help you write faster at the same time.

AP Human Geography Tips and Test Taking Strategies

 conquyorexam.com/ap-human-geography-tips/

You may have heard that the AP Human Geography exam is said to be one of the least challenging AP exams there is. However, getting a 5 still requires effort, energy, time and the right course of action. If you are planning on taking the AP Human Geography exam you may want to know more about the test; it's structure and the right strategies to earn your 5.

The AP Human Geography course teaches students about geography, agriculture, and patterns within cultures. You will be zeroing in on the trends and processes which have shaped human understanding and overall metamorphosis of Earth. The AP Human Geography exam uses multiple choice and free response questions to gauge the knowledge retained by the student throughout the AP Human Geography course in a 2 part, two hour and 15-minute exam. We are going to give you a list of full proof AP Human Geography tips and strategies that students like you are using to do just that. If you are looking to obtain the highest score possible on your AP Human Geography exam, this is the post for you. This list of AP Human Geography tips is designed to help you conquer your exam. Let's get started.

If you're still looking for extra help, **[check out our comprehensive guide on the best AP Human Geography review books here.](#)**

AP Human Geography General Study Tips

General How to Study for AP Human Geography Tips

1. **Read for understanding.** Your classroom work is the foundation for your AP Human Geography knowledge. Make sure that you are not skimming through chapters but instead consistently reading each chapter for understanding. Annotating and taking notes on essential information will also aid in future retention.

2. **Be aware of how you will be scored.** The AP Human Geography exam is made up of 2 sections. The AP Human Geography exam includes multiple choice and free response: You are allotted 1 hour for 75 multiple choice questions and 1 hour and 15 minutes for the three short response questions. Each section is worth 50% of your overall score. Machines score the multiple-choice part of the test whereas readers grade the free response questions. These readers will compare your answer with a detailed rubric which has the point breakdown for each section. Although readers are looking to give as much credit as possible for right answers, it is also important to remember that once your answer begins to be evaluated and points are provided, they cannot be taken away.
3. **Get feedback from other AP Human Geography students and teachers.** You are not the first person taking this exam, and I can guarantee that you won't be the last. Talk to other students or even watch YouTube videos about other people's exam experience. For example, one student suggests taking notes in a way that you can understand; this may be flash cards. Rewriting the chapter will not aid you in passing the AP Human Geography exam. Create notes that include terminology and formatting that you can understand. Check out more tips [here](#).
4. **Don't rely solely on class notes.** Your class notes are a helpful resource for studying for the AP Human Geography exam; however, they do not contain everything you need to know. It is impossible for your AP Human Geography teacher to provide all the required information which is why it is imperative to use your resources. You need to go beyond the class work and dedicate time outside of school to reading, knowing and understanding the material.
5. **Invest in an AP Human Geography review book.** Although buying a prep book may seem like a cliché suggestion, it will only help you in the long run. AP Human Geography review books are a fantastic way not only to summarize what you need to know for the AP Human Geography exam, but they also provide information that may not have been learned in the classroom. Review books also come with pre-made study guides, practice tests, and strategies to help you achieve the 5 that you desire. Many prior students attribute the Barron or Princeton Review books to their success on the AP human geography exam.
6. **Start studying early and scheduling time for your studies.** Cramming the night before your exam is never a way to guarantee a good score. Start early. This course is generally a freshman's first introduction to AP courses. Use that to your advantage by using your free time to read over notes, create AP Human Geography exam reviews and take practice tests. Outside of studying or doing course-related work spend extra time doing small activities that will have a significant impact. Allocate 20 or so minutes a day to reviewing concepts or going back over vocabulary. You will thank yourself later.

7. **Utilize the resources available to you.** We live in an era where the possibility of finding things is limitless. Don't put all your eggs in one basket. No one resource will allow you to know everything possible for the exam. School websites, the college board site, and even AP Human Geography podcasts can be great avenues when looking for review materials and AP Human Geography study. Mobile device applications and AP Human Geography teacher websites can be an excellent source for finding study materials.
8. **Use your social media accounts to your advantage.** Find favorite AP Human Geography course YouTubers on Instagram, Twitter, Pinterest and YouTube and follow them. Motivation comes in all shapes and forms. Not only will you be able to get c test tips and material. This is also an opportunity to network with other students taking or who have taken the exam and pick their brains. Popular pages for AP Human Geography include [Andre Patterson Geography channel](#) where he goes in-depth on concepts to know in each chapter as well as providing tips for test taking.
9. **Create a plan of action for studying.** Before jumping head first into the realm of AP Human Geography exam prep create first a plan of action for how you will study. Some people opt to begin and end their overall AP Human Geography Exam preparation with a practice test. Doing this allows them to gauge where they were and determine how far they came since the first exam. Others choose a more classroom structured approach, choosing to review the materials then take a formal practice exam halfway through to gauge how they are coming along. Whichever method you choose is, however, up to you.
10. **Jot down areas where you need improvement.** Whenever you complete a practice AP Human Geography exam make sure that you go over your answers and understand the explanations. Pay attention to why something was wrong and from there create a list of areas where you need to improve or do further study. Generate a study guide from these areas to ensure you are covering the necessary topics and categories.
11. **Review your 'General Geography' unit.** The general geography section of the AP Human Geography review is important but often overlooked. This section includes topics like latitude, formal regions, and longitude. Although it only makes up a small section of the test, it's essential to ensure that your map reading and map identifying skills are up to par to ensure success.
12. **Create flashcards to help you remember vocabulary.** The AP Human Geography exam is highly vocabulary based. Create flashcards and have a classmate or friend test you on them. Include examples on your flashcards to be even more prepared.
13. **Make your notes unique to you.** Taking notes using a voice you are familiar with will mostly aid you in engraving things in your brain, anyone can regurgitate facts from a book. The more that you write and see the information, the more second nature it becomes.

14. **Use your mobile device to study.** Using your mobile device can be just as easy as studying from a book and with the added benefit of going everywhere with you. There are several mobile application options, but the top option is iScore5 AP Hug (\$4.99) and Acing AP Human Geography (\$.99). Other mobile applications include the following:
- Apple Device: Apps4Success – \$1.99, AP Human Geography (Upward Mobility) – \$5.00
 - Android Device: AP Human Geography Terms – \$1.29, AP Human Geography (Upward Mobility) – \$3.99
15. **Make your review materials.** Though it may be easier to buy pre-made material, making your study materials will aid you more in the long run. Spending the time to create your materials not only assists you while studying, but it also helps you to recognize concepts and vocabulary from the repetition of writing them.
16. **Begin familiarizing yourself with the overarching topics which will be on the AP Human Geography exam.** On the AP Human Geography exam there are seven significant topics covered in the material. These seven topics will be the basis for the material covered in the exam. There will be a different frequency for each section. The list below shows the topic and its associated percentage of incidence on the exam.

Geography: Its Nature and Perspectives (5–10%)

Population and Migration (13–17%)

Cultural Patterns and Processes (13–17%)

Political Organization of Space (13–17%)

Agriculture, Food Production, and Rural Land Use (13–17%)

Industrialization and Economic Development (13–17%)

Cities and Urban Land Use (13–17%)

17. **Revisit concepts you have struggled with in the past.** Throughout your AP Human Geography Course, make a note of the areas that you have trouble with or feel as if you require further review. When beginning to study for the exam make an effort to continually review these concepts or topics so that they will not be a roadblock when taking the exam. Seek guidance from teachers or even classmates if you are still stuck on these topics.

18. **Teach concepts to others.** Teaching concepts to individuals who know nothing about AP Human Geography or the AP Human Geography exam can be a great way to sharpen your skills. Teaching forces you to process information in layman's terms and understand even some of the most challenging information.
19. **Know your regions.** Regions are a significant part of AP Human Geography. Not only will you have the possibility of receiving multiple choice questions based on maps and charts with information specific to various regions, but they may also appear in the FRQs. It is pertinent for you to be able to locate a region and relate it to the seven overarching areas of AP Human Geography.

AP Human Geography Multiple Choice Tips

AP Human Geography Multiple Choice Tips

20. **Dissect the question and let the process of elimination guide you to your answer.** Before making an abrupt decision, read the questions and the answers thoroughly. Use your knowledge of vocabulary and concepts to eliminate the answers which seem incorrect and arrive at the best fit. Look for keywords in the questions which will aid you in know what to put down as your answer. Words like all, except or negation words will help you in determining what the question is asking. Also, pay attention to the use of time and specific places within the questions. This will be a giveaway in specific responses for choosing an answer.
21. **Whatever you do, do not skip questions.** There is no penalty for answering a question incorrectly. If you are unsure and cannot arrive at an answer by process of elimination, make an educated guess. Skipping a question could only hurt you in the long run.
22. **Review and memorize models.** Models and graphs are a large part of the AP Human Geography exam. To adequately review make sure you are aware of how to define and identify models based on specific characteristics and charts. Use this [list](#) to go over all models covered in AP Human Geography, although it may be excessive it is imperative when preparing for the AP Human Geography exam.
23. **Keep your map and chart skills sharp.** A subset of the questions in the multiple-choice area of the test are based on or will require the reading of a map or chart. Make sure that you are aware of the models, their associated graphics and how to interpret them. When tackling these questions, you will need to not only dissect the question but in certain instances dissect the graphic as well.

24. **Study with friends.** Studying with friends not only makes studying more enjoyable, but it also opens a variety of activities that can be done. These activities can include quizzing each other, taking tests together and even competitive reviews. It also gives you a chance to look at someone else's notes to compare and even find the information you may have missed when doing your independent review.
25. **Manage your time effectively.** When taking the exam to be mindful of the time you are spending on each question. There are 75 questions and 60 minutes for the entire section. If you notice that you are spending too much time on one question skip it and leave it until the end or merely make an educated guess. Remember, do not leave any questions blank.
26. **Mimic test conditions.** To become familiar with taking the AP Human Geography Exam, make yourself familiar with the conditions that will be in place for the exam and practice them as much as possible. Learning how to test is just as important as learning what you'll be expecting on the test.
27. **Use quizlet.com as much as possible.** Quizlet allows students not only to create reviews for themselves but to use review materials produced by other students as well. Here you can use general flashcards, play matching games with terms, test yourself and even write in the definitions of words and concepts.
28. **When reading the test questions don't immediately look at the answer choices.** Before looking at the various answer choices try to come up with the solution on your own. Find the answer choice which is closest to your suggested answer and start eliminating options from there. This can help you to eliminate answers quicker and save time per question.

AP Human Geography FRQ Tips

AP Human Geography FRQ Tips

29. **Understand the parts of a quality AP Human Geography answer.** Before even beginning to practice writing free response questions, make sure you understand what a well-written answer looks like, the parts it possesses and overall how it is rated. [The College Board](#) provides many AP Human Geography FRQs and scoring guidelines for your review. Their list of sample questions dates to 2001 allowing you the opportunity to see patterns in the questions asked and potential scoring for your response.

30. **Answer your questions in the format which it was asked.** Aside from the AP Human Geography FRQs testing your analytical abilities, your organizational skills are assessed as well. Answer your question in the same matter in which it was asked. If your item contains three parts labeled A, B and C, your answer should be structured the same. When responding to the question with a new thought or topic, a separate paragraph should be used.
31. **No fluff allowed.** Do not add any fluff or filler text. The length of your response has no direct correlation to the score you will receive. You should also not be providing opinions or using the word “I.” Everything should be based on facts.
32. **Do not begin writing until you understand the prompt.** Before even beginning to write your FRQ response, pull out any action verbs which will aid you in determining what exactly the question is asking. These include words like define, explain or analyze. These words give clues for the type of response you will need to provide.
33. **Give yourself time to prepare.** Before jumping into writing your FRQ response, give yourself a set amount of time to prepare for each question. You are allotted roughly 25 minutes per free response question. Give yourself 3-5 minutes of this time to prepare your response and do any necessary outlining.
34. **Practice Free Response Questions while timing yourself.** It’s important to remember that you only have 75 minutes to finish the free response portion of the test. Although that may seem like a long time, that time will pass quickly. Practice your free response questions frequently. Utilize timers to keep you in check as well as answering a variety of different types of questions. The more you practice, the better you will get. After all, this is 50% of your overall score.
35. **Have someone grade at least one of your AP Human Geography FRQ Responses.** When taking at least one practice exam, have someone else look over your answers and review them, preferably a teacher who can give you concrete feedback on what you should change and how. Doing this will help you make sure that you are practicing your AP Human Geography FRQs in the wrong way.
36. **Provide relevant examples.** A large part of the free response questions will be defining and understanding vocabulary and keywords. Provide appropriate and specific examples when writing your responses. Use models, terms, and theories to support your answers. For instance, we know that a “custom” is a characteristic of a group of people; however, an example would be shaking hands when meeting someone new.

37. **Review Past AP Human Geography FRQs.** The AP Human Geography questions are meant to assess how you interpret maps and charts, how you analyze different geographical concepts and synthesize different areas. Consistent practice is one of the best ways to get good at answering AP Human Geography's free response questions. Answer questions which have provided detailed information on answers to see how your response will measure up to the prior subject's grade or score. There is no shortage of exam prep questions, and they can be found all over the internet, you can even create your own if you seek to challenge yourself further.
38. **Use the SNAP! method for understanding the AP Human Geography questions.**
- The SNAP! method will allow you to quickly and easily dissect and answer the question.
 - **Snap - The first piece is** locating the main subject and any specific information that you can about it. You may also draw information from your memory if it is relevant to what is being asked.
 - **Number of Parts** - Find out how many sections and answers are needed within each section. You should have the same amount of parts in the question as in your response.
 - **Action Words** - Look for action words which describe what you are being asked to do. This includes words like explain, define, identify or even choose. This is just a small set of the action verbs which can be found in your questions.
 - **Period & Location** - Make sure that you are aware of periods or locations which are needed for your answer or that are present within the question.
 - **!** - The last step is to look for vocabulary words. Circle any words that look familiar to you or that you have seen before. If you are unsure, attempt to define the terms during your brainstorming time.
39. **Do not answer FRQ questions as bulleted lists or fact lists.** Bulleted lists are not accepted on the AP Human Geography exam. Answers written in this format or just in a list of facts will not be accepted. Your answers must be written in complete sentences in narrative format.
40. **Do not go overboard with information.** Adding excess information when answering your FRQs is not necessary. You should only be providing what is needed to answer the question entirely. For example, if your question asks for three examples, you should only provide three examples. If any more are provided only the first three will be scored even if the first one is incorrect and the last example is correct.
41. **Understand the "Why."** Many FRQs want to know the why behind a concept. Make sure you understand why many events take place and are prepared to give examples of how concepts have manifested themselves in the real world.

42. **Add relevant details to all of your responses.** One of the most important things to do when answering the AP Human Geography questions is to be specific and use as much detail as possible. You should be including examples, samples, and verbiage that lets the grader know that you know the material.
43. **Remember that short answers not essay.** Although your free response answers should be in narrative format, you should not be writing your AP Human Geography FRQ answers in 5 paragraph essay format. Instead, you should be writing a series of paragraphs which are cohesive. You do not need to be concerned with providing the traditional parts of an essay.
44. **Start with the AP Human Geography FRQ you can answer with the most confidence.** Before beginning, any work on the FRQ questions read each question carefully to determine the order in which you should answer the questions. Start with the item you are most familiar with and answer the other questions accordingly. This allows you to get credit for the information you know while also giving yourself extra time to explain the others.
45. **Your response should be clear and legible.** There is nothing worse than getting a question wrong because the reader could not distinguish the words in your answer. If needed, practice writing neatly and quickly in order to avoid any confusion. Do not use harsh scratch outs or scribbles. When you make a mistake simply put a line through the error only. Any wording that looks like it is crossed out will not be scored.
46. **Proofread your answer.** If your answer doesn't make sense to you, there is a good chance it also won't make sense to anyone else. Do as much proofreading as time will allow. If you have planned accordingly, there won't be many changes to your response at the end.

Tips from AP Human Geography Teachers

Tips from AP Human Geography Teachers

47. **Review questions which are commonly missed.** When taking an AP Human Geography practice exam, review questions which are most commonly missed by you and your classmates. From these questions determine the topic it falls under and makes that section or concept a priority when reviewing for the exam.

48. **AP Human Geography guide books are essential to passing the AP Human Geography exam. Mr. Larkey from Minnesota.** I recommend but do not require an AP test prep book for AP Human Geography. These are essential for passing the AP Human Geography exam in May. It does not have to be the current edition, but I would recommend either the Kaplan or Barron's book. I do have some copies I can check out to students.
49. **Varley's review site is one of the best.** If you are unfamiliar, Mr. Varley from Lincoln high school provides students in his school and others around the country with a multitude of test material, AP Human Geography notes and more on his AP Human Geography [site](#). His Motherload packet is one of the most talked about items on his website.
50. **Stay up to date on current events.** AP Human Geography is actively happening around you every day. Look for examples of terms in your neighborhood to see concepts actively at work. Gentrification or assimilation are just two examples of words you may be able to see in your everyday life and apply when taking the exam.

Through this list and variety of other sources, you have gathered a seemingly endless supply of 50 AP Human Geography notes and tips on how to gain a 5 on your AP Human Geography exam. However, the most important thing for you to remember is to breath and be confident in your abilities. Although the AP Human Geography exam may not be the hardest exam, you'll take, if you can understand geographical concepts, interpret geographic models and explain keywords and vocabulary terms in depth, you are well on the way to achieving a 5. In addition to being well versed in the information on the exam you must also continue to practice timing. Once you have successfully married the those two items a 4 or a 5 is within your grasp.

AP Physics 1 & 2 Tips and Test Taking Strategies

 conquereyourexam.com/ap-physics-1-2-tips/

We get it. Studying for the AP Physics exam can be difficult and finding a complete list of AP Physics tips is tough. For many people, this is going to be the hardest test you're going to take out of all your AP courses. But if you have the right AP Physics 1 study guide and an AP Physics 2 study guide you may be able to help yourself along the way.

This comprehensive list of AP Physics tips is intended to provide you with AP Physics 1 resources as well as help you with many of the areas that you might find difficulty in AP Physics 2 if you tried to go it alone. We're going to go over some of the best tips and tricks to help you understand where to focus your attention and how to get the 5 you're looking for. It requires a thorough understanding of AP Physics 1 dynamics and Physics 2 areas as well.

Overall, this test is going to take 3 hours to complete. It's divided into a multiple choice section and a free response section. Within the multiple choice, you'll have 50 questions to answer. Within the free response, you'll have 5. Keep in mind that those free response are not all the same.

Out of those questions, 3 will be short answer, 1 will be an experimental design, and 1 will be quantitative/qualitative translation. Make sure you're prepared for each of the different styles that your questions could take.

Hopefully, each of these tips is going to get you off to the right start when it comes to your AP Physics 1 exam, and you're AP Physics 2 as well. Whether you're looking for general study tips or more specific AP Physics 1 resources and AP Physics 2 review, you'll have no problem finding some great ideas right here.

If you're looking for the **best AP Physics 1 review books, read our guide here**. Taking AP Physics 2? **Our guide to the best AP Physics 2 review books can be found here**.

AP Physics 1 & 2 General Study Tips

General Study Tips for AP Physics 1 & 2

When it comes to studying for anything, the first thing you should focus on are the general tips. These are the things that are going to help you with all aspects of the test, whether the multiple choice or the free response. Make sure you go over each of these and start implementing them into your practice. From there, you're going to want to move on to more specialized areas for study. This is going to start the basics of your AP Physics 1 review and our overall AP Physics prep.

1. **Start with the major ideas of physics** – Start your study process at the top by focusing on the major ideas that physics is broken into. Don't try jumping immediately into the smaller, nuanced ideas.
2. **Take practice tests** – Practice tests, especially the ones that come from CollegeBoard, are going to make it easier to figure out where you are, and that's where you'll get AP Physics 2 practice exam multiple choice questions. You'll be able to get an idea of what the test will be like and which areas you struggle in. So make sure you take an AP Physics 1 practice test and an AP Physics 2 practice exam.
3. **Grade and review your practice tests** – Look over the answers you get and the answers you get wrong and find out what you're having troubles with. You'll want to focus on the areas that you're struggling with on your practice tests or questions.
4. **Know why you're getting questions wrong** – Pay attention to what it is that is leading you to incorrect answers. Are you choosing the wrong equations? Making math mistakes or confusing different concepts or something else? You'll want to know the problems you're having and why.
5. **Review your labs** – By going through labs that you've already done, you're going to be better prepared for the free response questions that will be asked on your test. Make sure you fully understand those labs and how they work such that you would be able to explain them.
6. **Study what's actually on the test** – Look at the topics that are actually on the test before you start studying. You definitely don't want to waste your time trying to learn something when it's not even going to be tested.
7. **Make flash cards** – Flashcards allow you to remember specific information and they make it easier for you to study while you're doing other things. These cards can be easy to take with you to school or wherever else you might go so you can squeeze in a few minutes of study at any random time.
8. **Pay attention to learning material** – You'll be studying for physics 1 & 2, but these are not the only physics tests being offered. Note that these tests are not the same as physics C or any of the others that you may find. They are also not the same as the old test B. These tests each cover different things.

9. **Don't assume your class will be enough** – You will definitely not be able to pass this test if you don't do self-study outside of your class. You absolutely need to make sure that you are studying as much as possible and that you are getting help besides just your regular physics book. You'll need more than an AP Physics 1 semester review. Knowing how to pass AP Physics class or the AP Physics unit 1 test is not going to be enough.
10. **Pay attention to CollegeBoard** – These are the people who make the tests so if you can find study resources, practice questions and sample questions (including old questions with answers) study what you can find of these.
11. **Use your calculator** – As we'll talk about later, calculators are allowed. Make sure that you're actually using yours. Even if you think you can do the math on your own, it's important to check your answers at the very least with the calculator to make sure you haven't made a mistake.
12. **Know the seven science practices** – The seven science practices are going to be extremely important to be able to answer the questions you're going to be asked because they're going to relate to a number of different areas.
13. **Understand how to establish lines of evidence** – You're going to need to explain how you get from one thing to another and that means establishing lines of evidence that are clear, concise and thorough at the same time.
14. **Know how to develop testable explanations** – When you make a statement you need to be able to explain it, and in physics, you need to be able to show how it can be tested and still found to be true (or false).
15. **Find a free course** – There are several free courses that you can take online, and many of them are actually live, which means you can ask questions within the group discussion and you can get responses and information from people who really understand the test. You may even find AP Physics 1 teacher websites to follow.
16. **Reread the questions** – There are certain words that will entirely change the meaning of a question, or if you mix up units, it could completely change the equation that you need to perform. Make sure you reread each question to make sure you haven't misread anything.
17. **Memorize your basic equations** – Math is going to be a big part of your physics test, and you'll need to know the equations that are going to be asked. Studying and memorizing the mathematical equations is going to set you up to succeed. You will get an AP Physics 1 equation sheet, but it's easier to know some of your equations beforehand.
18. **Know concepts from each major idea** – Once you've started to delve into each of the major ideas of physics, you also want to go a little deeper into some of the concepts. Make sure you also know how they fit into each of the major ideas. You'll need to know things like the AP Physics 1 kinematics test.

19. **Create a study group** – Having a few people that you can study with is going to make it a whole lot easier to understand the information. You can each help out with the areas you're strongest at and get help in the other areas.
20. **Study one major idea or topic at a time** – Focus on one major idea at each time. If you try to jump into too many areas at once, you'll find yourself overwhelmed and struggling to remember how different ideas relate to one another.
21. **Practice math** – There's a lot of math involved with physics, so you want to make sure that you're practicing those equations. Practice just doing the math and remember that you will have a calculator available to do the problems.
22. **Practice diagramming questions** – Diagramming out questions is going to make it easier to answer them in a lot of cases. Practice how you can diagram out the different sections and different types of questions, so you're fully prepared.
23. **Know what the question is asking you** – Make sure in any type of question that you know exactly what's being asked. If you don't understand the question read it through until you do. Even if you think you know what it means read it through again to double-check.
24. **Study where you need help** – Don't spend a lot of time on areas that you're already pretty solid. Instead, spend your study time working on the areas that you're struggling in or that you don't have the same solid grasp.
25. **Use review books** – Review books, especially Princeton, are going to help you a great deal in learning the material you don't know and reviewing the rest. You want to get a good study book that goes into all of the topics so you can get help in all the areas where you're struggling.
26. **Study test prep books alongside the class** – Get a test prep book while you're taking the class rather than waiting until after. Then work through the prep book while you study those sections in class for a little extra help and support.
27. **Keep track of your time** – Make sure you keep track of your time throughout the test. You have a set amount of time to get everything done so you want to make sure you can get them done in that amount of time. Time yourself on your practice tests as well.
28. **Always check your math** – You should always check the math that you do because you want to make sure that you're doing it correctly. Making a mistake on a math problem is easy and could make your entire answer incorrect.
29. **Watch videos on Khan Academy** – AP Physics 1 Khan Academy has a number of great videos that dive deep into the information that you're going to need for your physics test. It will help you focus on any of the areas that you need additional help.
30. **Watch videos on YouTube** – Another great resource is YouTube, where you'll find a number of lectures that will walk you through different points. Find lectures on different areas that you struggle in and make sure you aren't paying for any of these videos.

31. **Keep your videos short** – If you are watching videos don't try to dive into ones that are too long. The best thing you can do is watch short videos that are going to give you information without bogging you down too much with information that you can't remember.
32. **Use practice problems in your physics book** – There are practice problems throughout your book. Make sure you're using them to your advantage by studying each one and working out the problems. Use the answers in the back of the book as well.

AP Physics 1 & 2 Multiple Choice Tips

AP Physics 1 & 2 Multiple Choice Tips

When it comes to the multiple choice questions, you're going to get a total of 1 ½ hours to answer 50 AP Physics 1 multiple choice questions and answers and AP Physics 2 multiple choice as well. These questions will account for 50% of your score, so it's vital that you pay attention and value your time. You'll have a little under 2 minutes per question, so if you're answering the questions the right way (which we'll talk about), you shouldn't have a problem getting an answer for each of them.

33. **Evaluate multi-select questions** – There are almost always at least a couple of questions that will ask you to select more than one answer. Make sure that you evaluate these questions carefully to know what they're asking and to choose the right answers.
34. **Choose the best answer in every case** – In some cases more than one answer might seem to be correct. Don't just choose the first correct answer. Always look for the answer that best fits the question and go with that one instead.
35. **Read every answer before you choose one** – Along the same lines as the last point, make sure that you read every single answer before you pick the one that you're going to go with. You might find one that fits the question better than the one you initially chose.
36. **Answer questions you know first** – When you first get your test read through the questions quickly. Any questions that you know should be answered immediately. Skip over anything that you don't immediately know the answer to.
37. **Keep track of your answer sheet** – If you're going to be skipping around on different questions, you want to make sure that you keep track of where you are on your answer sheet. Keep all the bubbles lined up with the proper question, so you don't lose points for filling in the wrong bubble.

38. **Try to come up with the answer before you read the options** – When you read the question see if you can come up with the answer before you even read the options. You may already know what the answer is and then you can fill it in quickly. That means you use up less of your time.
39. **Don't second-guess yourself** – When you feel confident in your answer or even if you just select an answer don't go back to it. Don't second-guess your choices. In most cases, the gut reaction you have to something is going to be correct and second-guessing could make you make a mistake.
40. **Make an educated guess** – If you don't know the answer to a question make an educated guess. That means narrow it down by eliminating the answers you know aren't true and then picking one out of the ones left behind. You'll at least improve your odds of getting the right one.
41. **Don't leave any questions blank** – You aren't going to lose any points by getting a question wrong. That means you should never leave a question blank. Even if you didn't eliminate any of the answers, you would have a 25% chance of getting it right compared to 0%. And in most cases, you can eliminate at least one answer.

AP Physics 1 & 2 FRQ Tips

AP Physics 1 & 2 FRQ Tips

The second section of this test is the free response section, and you'll have AP Physics 2 free response and Physics 1. This one actually encompasses several different types of questions, so it's a little more complicated to explain, but you're definitely going to want to pay attention here. You get another 1 ½ hours to complete this section, which is also worth 50% of your test score. In total, you're going to have 5 questions. Of those, 3 will be short answer, 1 will be experimental design, and 1 will be quantitative/qualitative translation.

42. **Write in paragraph form** – These questions require you to write out your answer in full paragraph form. You want to make sure that you are filling out your answers in complete sentences and breaking each area down into paragraphs to make it easier to read.
43. **Use proper vocabulary words** – You want to make sure you have the proper vocabulary words throughout this section. You could lose points if you're not careful and mix up some of your words or if you don't use a word properly. Make sure you can explain how each of these words applies to your equations.

44. **Use evidence from physical principles and equations** – Make sure you're supporting everything you say with evidence. Evidence from physical principles and equations are going to be especially good for getting your point and information across.
45. **Always explain** – Don't just state a fact. Make sure that you actually explain what you're saying and what kind of evidence you have to back it up. That's going to support your position and help you get the points that you're looking for.
46. **Draw diagrams when possible** – Drawing out diagrams is going to make it even easier to back up what you're saying and to show that you've done the work. These also let the reviewer know that you understand what you're talking about and understand the problem.
47. **Answer easier questions first** – Read through the questions and answer the ones that are easiest first. You want to make sure you get the most points possible, and by answering easier questions, you're not going to be wasting your time on more complex ones. You'll be able to get more done.
48. **Underline values or information in the question before you start** – As you read through the question make sure you mark areas that are important. Mark the values you'll need for equations and any information that you need in order to answer it. This allows you to go back through when you finish your answer and make sure you have everything.
49. **Explain equations, interim answers, steps, and principles used** – Your explanation should always include equations, interim answers, steps, and principles. Make sure you talk about which ones you chose and why as well as showing each of them in your explanation.
50. **Move through the steps logically in your answer** – Make sure you flow through each step in your answer. You want to get from step one (choosing the equation to use) all the way to the final step (your answer and explanation) in order. This makes it easier for the reviewer to understand.
51. **Avoid extraneous information** – Don't add in a lot of extra information. You're going to bog down the reviewer, and you could actually end up with incorrect information that loses you points if you try to add in too much additional content.
52. **Label everything properly (especially vectors)** – When you draw out graphs make sure you're labeling everything. You should have vectors, units and everything else possible labeled properly, so it's clear what you're saying and what your graph means.
53. **Sum up with if-then statements** – The conclusion of your free response questions should be if-then statements. Don't forget to state your if-then but also state the reverse so that both outcomes are accounted for.
54. **Answer every part of a question** – Make sure that when you go through the question, you answer every part of it. You may want to go through in the question and check each of the different parts to make sure that you're getting through each of them.

55. **Label your answer to make each answer easy to find** – When you answer the question, you may want to label out each of the different sections to make sure they're easy to find and to make sure that you've answered each of them clearly and fully.
56. **Only the number of examples or equations asked for will be evaluated** – If the question actually asks you for 1 example, that means the reviewer can only read the first example you give. If it's incorrect, it doesn't matter that other examples you gave may have been correct. They can only read the first ones given and up to the number required.
57. **Keep it simple** – Don't get too overcomplicated when you're trying to explain things or you could lose points. Also, make sure you stay organized on paper. You want to keep your answer flowing in the right direction, and you want to make sure that it's organized enough that a reviewer can see what you're trying to say.
58. **Primarily focused on conceptual over mathematics** – Most of these questions are going to be focused on concepts rather than mathematics. Understanding how to apply concepts and how those concepts work is going to be important for your ability to answer these questions. Knowing AP Physics 1 conceptual questions and AP Physics conceptual questions, in general, will help you here.
59. **Write clearly** – Your handwriting could lose you points if you are not careful about how you answer. Try to write as clearly as possible so that a reviewer will be able to understand your answer and to read through it properly. If they can't read it, they can't give you points for it.

AP Physics 1 & 2 Test Day Tips

AP Physics 1 & 2 Test Day Tips

When it comes to test day you want to make sure that you're fully prepared. You want to make sure that you have everything you're going to need (and don't have anything you're not allowed to). You also want to make sure that you're going to be at your absolute best. That's going to require you to put in a little bit of effort, by following the steps that we're going to talk about below.

60. **Bring a calculator** – You are allowed either a scientific, graphing or four-function calculator. You definitely want to make sure you have one even if you think you aren't going to need it. It's always best to be prepared for anything, and this will be one of your AP Physics 1 essentials.

61. **Bring an extra calculator** – You are allowed two calculators in the test, but you are not allowed to share a calculator with anyone else. Make sure you have an extra calculator just in case something happens to the first one or the battery dies. You want to have a calculator at all times.
62. **Know where to be and when** – Make sure you know what time the test is going to be and where it's going to be held. You should practice driving there before the day of your test, so you're comfortable getting there with plenty of time before your test starts.
63. **Know what you can and can't have** – Study the list of things that you can bring in with you and the list of things that you can't. Make sure that you have only the things that you're allowed to have and that you have all of the items you're going to need. You'll want to know what to bring to AP Physics 1 exam.
64. **Eat a good meal** – Make sure you eat well before you go to your test. You want to be able to concentrate on the test, and that's not going to happen if you're hungry. If you're given a break, you should also have a snack available to eat during that time to keep you focused through the entire test.
65. **Get plenty of sleep** – The night before your test you should be getting plenty of sleep. Don't stay up late studying or doing anything else. You want to be well rested so that you can focus when it comes time to start your test.
66. **Check your calculator is approved** – Make sure the calculator that you're planning to bring is an approved one. You don't want to get there and find out that you can't take your calculator in or that you're going to be disqualified.
67. **Take some time off** – Don't study the night before the test or the day of the test. You want to take a little time off and make sure you get a break in. You won't be able to really capture a lot of information if you try to cram it in later on in your studying or right before the test.

There are a number of different things that you should be doing in order to make sure you're better prepared for your physics test. Make sure that you pay close attention to equations, that you get plenty of sleep and that you're focusing on the overarching ideas all of this should help you on your AP Physics 1 practice and your [AP Physics 2 exam review](#). Also, make sure that you never leave any of the questions blank and take an AP Physics 2 practice exam. You want to do well with this test, and hopefully, these tips are going to help you do just that.

AP Psychology Tips and Test Taking Strategies

 conquyorexam.com/ap-psychology-tips/

When it comes to your AP Psychology test, you're definitely going to want to check out these AP Psychology tips and test-taking strategies. Each of these should help make your studying a little bit easier, and maybe make it easier for you to get the 5 you're looking for.

If you're taking all that time and putting in all that work to take an AP class you want to make sure you're getting the credit for it, right? You want to make sure that you take the test and that you're going to get a good grade so it will apply toward the university of your choice. That's why we've done some research to help you out.

Each of these tips is designed to make your studying more effective, whether they're general test-taking tips and strategies or they're focused on the different parts of the test. That way, you can focus on the areas that are most important or most difficult to you and skim through the rest.

Make sure you're doing everything you can to study the right way, and definitely don't skip out on anything you need for your AP class now that you're in the home stretch. This test isn't going to be easy, but it doesn't have to be as difficult as you might think it is. At least, not if you know what you're doing.

The test is created by CollegeBoard, and that means they're going to be one of your best resources for studying your AP Psychology syllabus, but they're definitely not the only resource you're going to want to use, so make sure you take a closer look at this AP Psychology exam study guide.

If you're looking for the **[best AP Psychology review books, read our detailed guide here.](#)**

General How to Study for AP Psychology Tips

We'll take a look at more specific tips and sections of the test in a minute, but first, let's take a look at some general ideas. Each of these skills are going to help you overall, with the entire test. They're going to help you study in general so you can make sure you have the

knowledge and the foundation that you're going to need to do well in all aspects that this test is going to focus on. Also, start from the AP Psychology midterm when you're beginning intense studying.

1. **Check Out Appsychology.com** – While you're here, you're going to find a whole lot of practice questions, and they're separated by topic. That means you can focus on the areas that you're struggling with instead of the areas that you're already confident in.
2. **Create your own quiz** – Quizlet is one of the most popular ways to study for just about anything, and it lets you create quizzes that focus on areas you're struggling in. With this system, you're going to have an easy way to study when you want, and you can trade out questions however you want. You'll have AP Psychology review games here.
3. **Take practice tests on CollegeBoard** – This is the producer of the test, so they're definitely the people you want to study with. Their AP Psychology practice test is actually official tests that were used in the past. That means you're getting a look at questions that are realistic to the real thing.
4. **Practice old FRQs on CollegeBoard** – These are going to be the hardest questions in the entire test, so you're going to want to look at some of the previous questions, so you have a good idea of what the questions look like as well as the type of information that they're looking for in a response.
5. **Review responses for FRQs** – When you look at the old FRQs you're going to want to take a look at the recommended responses as well. This will show you what you're likely going to be graded on and what you should be writing out when you answer your own FRQs in the official test you're taking.
6. **A lot of memorization** – This test is actually going to focus more on memorizing information and vocabulary rather than being able to conceptualize like you would be doing with other tests. If you know how to regurgitate information you'll be better off.
7. **Make flash cards for vocab** – When it comes to the vocabulary you want to make sure you're using flash cards. These will help you a whole lot more when it comes to the memorization of the information. They'll also make sure that you can apply the information later.
8. **Always be studying throughout class** – When it comes to your class, you should be paying attention to the information that you go over in class as well as any information you're struggling with. You want to make sure you read the Psychology textbook along with your class and that you're taking AP Psychology notes.
9. **Online courses can help you improve your learning** – If you're in need of a little more information or if you're struggling with certain areas or even if you just want a little more review you can look at different online courses. These courses are going to make it easier for you to double up your information.

10. **Pay attention to psychological concepts in real life** – Look for psychological concepts in your normal life. You will likely see examples just walking down the street or spending time with your family and friends. Seeing these things in real life makes them a whole lot easier for you to remember.
11. **Find a study group** – A study group can make it a whole lot easier for you to stay focused and it's also going to help you get the hang of any information that you might have trouble with. Teaching someone information you know well can also help it to stick even better in your head. Create an AP Psychology review packet together.
12. **Outline sections of the course** – As you're going through the course take the time to outline the information. You want to make sure you can focus on the most important sections and that you will be able to go back to information about the sections as you continue through other areas with your AP Psychology review.
13. **Know why you make mistakes on questions** – When you're doing practice questions and practice tests you want to make sure that you're paying attention to the specific ones you get wrong. Know why you're making those mistakes and focus on how you're going to improve those areas.
14. **Focus on your weak areas** – Spend more time on the areas that you're weak in. Rather than spending a lot of time on areas that you're already strong in you're going to see more improvement and a better result on your final test if you focus on areas you're not doing well on.
15. **Score your practice tests** – When you finish a practice test make sure you go through and score it. This is going to help you pick out the areas where you're making mistakes as well as the areas where you're already weak. If you're not scoring the tests you're going to miss the improvements you could be making.
16. **Know what's not on the test** – Pay attention to the things that are actually on the test and the things that aren't. You don't want to waste your time studying things that aren't even going to be on your test. You can find what information is going to be there (or could be) on CollegeBoard's website.
17. **Create mnemonics** – There are some things that you're going to need, and mnemonics could be a great way to do it. If you're feeling comfortable with it just go ahead and create your own or you can probably find some online with different research systems.
18. **Use review books** – Review books are going to be important and can help you study the important information that's going to be on the test. Make sure you're getting books like the Princeton Review and Barron's because these are some of the best and most popular for a reason. Use a quality AP Psychology book.
19. **Study hard the last week** – The last week is going to be the most important time, and you want to make sure that you're really pushing yourself at this point. You're going to need extra practice here, and this is going to be the last big draw before you cut yourself off the day before.

20. **Know the psychological perspectives** – The psychological perspectives are definitely going to be on your test so make sure you understand these and how they interact within the field. Make sure you also know how to apply them in different situations.
21. **Mimic the situation** – Did you know that you're actually more likely to regurgitate the information you need for your test if you read it the first time when you're in a similar environment? Set up a room very similar to the test room and use that as your study space to trigger the information when you get to the test.
22. **Use repetition to your advantage** – When it comes to psychology, you're going to see that repetition is a big part of the whole thing. Well, you can actually use that repetition when it comes to studying because you can focus on repeating areas that you struggle with until they stick.
23. **Apply the concepts** – This is going to be one of the most important aspects of your test. You'll need to know how the different concepts actually apply in the real world and in different situations. If you can apply them you're going to have a leg up in the actual exam.
24. **Try online courses** – There are online courses for just about anything, and you may be able to find some that are related to the specific areas of psychology that you're struggling with. If you can then take a little time to go through these courses alongside your other studying or your class.
25. **Know the key figures in psychology** – You should know about the different people who are important to psychology and how they contributed. You should know what they did and why their contributions were actually important in the long run or how they changed things in psychology.
26. **Know the research methods** – Research methods are going to be an important aspect of your test as well. Make sure you understand each of them as well as how to apply them when they were invented and by whom. The more you know about them, the better off you'll be.
27. **Remove your distractions** – It's always important to remove excess distractions when you're trying to get anything done. You want to make sure you have a way to focus and that you're not going to be annoyed or sidetracked by music, loud noises, TV or other people in your household.
28. **Get a tutor** – If you're struggling with this topic or any of the specific areas within this topic, you may want to look into getting a tutor who can help you with AP Psychology exam practice. They may be a professional or someone who has taken the test already and may be able to help you with areas that they struggled too.

AP Psychology Multiple Choice Tips

AP Psychology Multiple Choice Tips

The multiple choice questions are going to take up most of the exam at 100 questions, and they're also responsible for the most significant portion of your score. In fact, these questions are going to account for approximately 66.6% of your total exam score, and you're going to have 1 hour and 10 minutes to answer all of them. That doesn't give you a whole lot of time per question, so it's going to be very important for you to moderate your time on your AP Psychology multiple choice answers.

29. **Use process of elimination** – You should always use the process of elimination for questions that you aren't entirely sure on. In nearly all cases you can get rid of at least one incorrect answer. That improves your chance of getting the question right from 25% to 33%. Every bit helps.
30. **Use your own logic** – It's going to be essential to read through each question and answer with logic. In psychology, the information has to make logical sense. That means you need to find an answer that seems to fit. Make sure that you're paying attention to how the answers really do when it comes to reasonability.
31. **Answer questions you know first** – Read through the questions quickly and answer any of the questions that you know first. That means if you can read it and immediately understand what the answer is, write it down and fill in the bubble. Then move on to the rest of the questions.
32. **Choose an answer after reading the question** – Before you even read the answers try to come up with what the answer to that question is going to be. If the answer is in the options choose it, fill in the bubble and move on. Don't waste any additional time on it.
33. **Look for words in the question that change the meaning** – Words like 'always,' 'never,' or 'not' are going to change the meaning of the question entirely. Make sure that you're watching for these words and that you answer the question according to what is actually being asked.
34. **No penalty for guessing** – You're not going to lose points or be otherwise penalized for taking a guess. That's why educated guesses are best but even if you have no idea about a question make sure you put something down. You have a 25% chance of being right if you guess.
35. **Don't overthink the question** – Don't think too hard about a question. Chances are it's not as complex as you think it is and you could end up getting an answer wrong because you're not paying attention to what's actually being asked of you when you read the question.
36. **Choose the best answer, not just a correct answer** – There could be more than one answer that's technically correct, but there's only going to be one answer that's the best one. Make sure you're reading through all of the answers and that you choose the one that's best.

37. **All questions are worth the same** – You get the same number of points for each question that you answer in this section. Don't spend time on difficult questions first. Make sure you're reading through the easier ones and skipping over difficult ones the first pass through.
38. **Keep your score sheet right** – If you're going to be jumping around to different questions especially you need to make sure that your score sheet is accurate. Make sure you're not skipping over any of the questions or that you're not getting answers in the wrong bubbles or for the wrong question.

AP Psychology FRQ Tips

AP Psychology Free Response Questions Tips

With the free response questions, you're going to have a total of 50 minutes to answer only 2 prompts. That means you have 25 minutes for each one and together they make up 33.3% of your total score. That means you want to take your time on each of these and you want to make sure you're answering them as fully and accurately as possible. You don't want to underestimate how important they are just because the multiple choice portion is responsible for a larger percentage of your total score.

39. **Budget your time carefully** – You only get 50 minutes for these 2 questions, and while that may sound like a lot, you don't want to realize that you've spent entirely too much time on one of the questions and not left yourself enough time to answer the other one.
40. **Look for verbs in the question** – Verbs are going to tell you what you should be doing and how you should be answering the question. If you take the time to read for them and mark them down, you'll be able to focus on these areas when you start actually answering the question.
41. **Mark important sections in the prompt** – When you're reading through the prompt make sure you mark out the different sections that are most important. This isn't just the verbs, but any areas that you can use when it comes to actually writing the answer down are also important.
42. **Use the right terms** – Use terms correctly when you write out your answer. You need to show that you know the terminology and that you know how to apply it within the situation accurately. You should also use terms that are used in the prompt to show you understand them.

43. **Use specific examples in your answer** – Include examples that are specific and practical. This shows that you know what the question is asking you for and that you fully understand the theories or situations that you're actually talking about and you should get the points.
44. **Review the rubric** – Before you get to test day, you should be reviewing the rubric of what is actually graded when it comes to your FRQs. You want to make sure you're focusing on the most important content, and formats and the old rubrics are going to give you a better idea of that.
45. **Review the instructions** – Make sure you know the instructions for the question that you're answering and what you'll need to do in order actually to get any score at all. You'll want to read through the instructions one more time before you even start writing.
46. **Answer in the answer booklet** – Don't get caught up in writing out notes and information in your test booklet. The reader that grades your test is only going to receive the answer booklet, and they are not going to receive the test booklet that you wrote more information in.
47. **Don't restate the question** – You have no need to restate the question. Even though the reader isn't going to get your test booklet they do have a copy of the question. They don't need you to rewrite it, and you don't want to take all the time that it's going to cost in order to rewrite it.
48. **Get to the point** – Make sure that you jump right into whatever is the point of your statement. Give the thesis or the main idea behind what you're writing off the bat, and your reader is going to be more likely to give you the points that you want for your answer.
49. **State the intent behind all of your evidence** – Explain what your evidence is trying to do. Explain whether you're using it to back up your idea or whether it's being used as a contrary point. Make sure you express your intent clearly so you can make sure that your information is clear and understandable.
50. **Plan out your answer before you start writing** – Before you even start writing out your answers you want to make sure you have a good idea of what you're going to write and how you're going to write it. You could make an actual outline, or you could just jot down some points.
51. **Demonstrate a thorough understanding** – You need to show that you actually understand what's being asked of you and how that information relates to different situations or to the world. The question is going to ask you to exhibit what you know about the topic, make sure you delve into it.
52. **Use complete sentences** – Don't use bullet points or an outline as your entire answer. You should have complete sentences and paragraphs that are going to express what you want to say. These will also help you showcase information about your evidence.

53. **Know what the question is asking** – Make sure you read the question carefully and that you fully understand what it's asking you to do. You don't want to miss out on points because you thought the question was leaning in one direction and it's actually asking you to look at something else entirely.
54. **Don't bother with a 5 paragraph essay** – You don't need a full 5 paragraph essay, though, as we mentioned, you will need full sentences and paragraphs. What you don't need is the introduction and conclusion that you'll find with a lot of formal essay structure.
55. **Answer every section of the question** – The question is likely going to have multiple parts so make sure you're looking at each part of the question and that you're answering each of them. Use evidence and information to back up your answer all the way through.

AP Psychology Test Day Tips

AP Psychology Test Day Tips

When it comes to test day you want to make sure you have a few things already prepared and that you're fully ready for everything that's going to come. After all, test day is the one that you're preparing for and that you're going through all of this for. You don't want to make a mistake when you get all the way to the finish line, right? So, make sure you're reading through each of these tips and strategies to keep you ready for that big day.

56. **Be prepared before the day** – Make sure you have everything you're going to need for the day of the test and that it's fully prepared before you get to that morning. You want to make sure you have all the information you're going to need and all the tools as well.
57. **Know what's allowed and what isn't** – Make sure you know the items you're allowed to bring in with you on test day and the things that you need to leave behind. You don't want to be kicked out of the test because you brought your smartwatch, for example.
58. **Know when and where to be** – Make sure you know where the test is being given, and you know what time it's going to start. You want to plan on being there early to get to your seat and relax a moment before everything starts. Make a test run driving to the test site at least one day before the test.

59. **Eat right** – Eat a good breakfast before you head out to the test so you can make sure you're not hungry in the middle of everything. You won't be able to focus if you're concerned about how hungry you are or you're thinking about when you can get to that snack you brought along.
60. **Take the day off studying** – The day before your test you should not be studying at all. You should be resting and taking a little bit of time to yourself. Studying during this time can actually be counterintuitive and could cause you to forget more than you learn of your AP Psychology review test.
61. **Relax** – Even though this test might be necessary to you it's also essential that you relax before you take it. You want to make sure you're focused on what's in front of you, but stressing about it is definitely not going to help you. Taking a few minutes (at least) to breathe will help you along.
62. **Get 8-10 hours of sleep** – Getting enough sleep the night before the exam is going to be an extremely important step because it keeps you focused. When you're tired, you're not going to be able to pay attention to the questions or to make sure you remember everything right.
63. **Schedule it for right after the class** – The best time to take your test is going to be right after you've taken the class. That's when the information is going to be the freshest, and it's when you're going to be most prepared. If you can schedule the exam for right when the class is done, you'll have the most information.

Hopefully, each of these 63 tips and strategies are going to make it a whole lot easier for you to do well on your test. It's especially important for you to take a look at AP Psychology review questions and to take the official tests from CollegeBoard to get an idea of what you can expect. You want to get a great score so you can use it for your university admission. So make sure you're looking through this AP Psychology study guide and that you're putting them into practice for yourself.

AP Statistics Tips and Test Taking Strategies

 conquereyourexam.com/ap-statistics-tips/

If you're reading this article, it means that you are looking for sure-fire ways to get a 5 on your AP Statistics exam. Never fear, you have come to the right place. In this article, I will provide you with strategies and tips that are working for students just like you. In short, if you want a higher score, you will love this article.

The AP stats exam is not one that should be taken lightly. In 2018, the average score was 2.88. There are several topics covered in this exam, and they include exploring data, sampling & experimentation, predicting patterns and statistical inference. We will give you tips on these topics and more to aid you in getting the 5 you deserve. This AP Statistics tips list is designed to help you defeat your exam. Let's get started.

If you're looking for the **best AP Statistics review books, read our guide here.**

General How to Study for AP Statistics Tips

1. **Know how scoring works.** Before beginning the exam, make sure that you are familiar with how scoring works and what each section is worth. The multiple choice section is worth fifty percent of your overall score and lasts 1.5 hours. It is worth 50 points, with 1.25 points for each question with 40 questions total. The second half of the exam consists of free response questions. This section includes five short answer questions and one investigative task. The first five questions are worth 37.5 points, and the last investigative task is worth 12.5 points. This question is worth the most on the exam.
2. **Missing a question is not the end of the world.** The AP Statistics exam is not traditional in the grading sense. Getting a question wrong is not as severe of an offense as expected since the tests are curved. The same question you may have missed may be the same one missed by 90 percent of other students.

3. **Familiarize yourself with the AP Statistics exam formula sheet.** On the day of the exam, you will get a list of formulas which is to be used on the AP Statistics exam. Look at this list before the exam to familiarize yourself with how everything is labeled as well as how to use them. A copy of the formula sheet is found [here](#).
4. **Don't try to memorize everything:** It's impossible for you to know everything that could be on the AP Stats exam. Don't waste your time attempting to remember the whole textbook. Understanding 60% of the material, as well as application, will aid you in getting a good score.
5. **Use YouTube tutorials when needed.** If you are struggling with solving a problem and need examples or a video review of concepts, YouTube is the perfect place to find answers. There are several YouTube reviews and tips videos to aid you while studying. Just searching "AP Statistics" will return a playlist which holds several videos to assist in your AP stats exam review.
6. **Choose a helpful review book.** Choosing a good review book is pivotal in your success on the AP Statistics exam. Many teachers and students recommend Barron's AP Statistics review book. It includes information as well as a multitude of practice exams to gauge your progress. Your AP Statistics review book will be your most trusted resource when studying for the exam.
7. **Create an AP Statistics review packet.** This packet should include information on the items you have found to be the most difficult. It should consist of sample problems with explanations and direct reference to resources.
8. **Engage and stay consistent.** One of the most important things you can do to ensure you are prepared for your AP stats exam is to participate and stay focused in the classroom. This is your yearlong prep course equipped with AP Statistics exam reviews and AP Statistics exam study guides.
9. **Review your notes often.** Your class notes can be beneficial when preparing for the AP statistics exam. Make sure that throughout the year you are reviewing them frequently to ensure that you are retaining the information.
10. **Take an AP statistics practice exam.** Nothing is going to prepare you more for the exam than practice. Take at least three practice exams when reviewing for the test and also consistently practice question 6, the investigative task. It will be one of the hardest problems on the exam.
11. **Give yourself time to study.** You should not consider your coursework as the only preparation that you need for you the AP statistics exam. To ensure that you are adequately prepared for the exam you should start studying at least one month before your exam date.
12. **Perform the Diagnostics practice test early.** The diagnostics practice test will help you understand what areas you need to practice further. Take this test first in your exam preparation journey to have a baseline for gaging performance.

13. **Know how scoring will break down.** There are four main topics covered on the AP Statistics exam. These include exploring data, sampling & experimentation, anticipating patterns and statistical inference. Make sure you gage your time based on the percentage of what will be on the exam.
 - Exploring Data:**Describing patterns and departures from patterns (20% to 30%)
 - Sampling and Experimentation:**Planning and conducting a study (10% to 15%)
 - Anticipating Patterns:**Exploring random phenomena using probability and simulation (20% to 30%)
 - Statistical Inference:**Estimating population parameters and testing hypotheses (30% to 40%)
14. **Make sure your calculator is APPROVED:** One of the worst things that can happen is getting to the exam and the proctor letting you know that your calculator is not an approved model. Before the day of the exam make sure you check the list provided by the college-board to ensure your calculator complies with their standards.
15. **Know how to use your calculator correctly.** For most, you will be using the same calculator you have used all year. However, if you are one of the few who forgets their calculator or chooses to borrow one, make sure you know how to use it. Your calculator is an integral part of this test. You should know how to use, with confidence, the statistics functions that your calculator offers and how to transpose the answers to match the format on the exam.
16. **Know your vocabulary.** As much as we think this is a math exam, it is also a test of vocabulary as well. To get the score, you desire you will need to know quite a few terms for the exam. This may include phrases like “random sampling,” “hypothesis,” or even “skew.”
17. **Create flashcards to help you study.** These cards can be physical or done via quizlet.com. These should include vocabulary as well as sample questions to ensure that you are adequately retaining the material.
18. **Study the AP Statistics material in groups.** Forming a study group is a helpful way to retain material. Different people process information differently, and it can be useful for someone else to explain an issue you may be having in a new way. Starting a regular study group also keeps you accountable for reviewing and studying the material.
19. **Create a plan for how you will study.** For many of you, AP Statistics isn't your only AP course. Therefore, it is vital to ensure that you are spending an adequate amount of time studying for each class. Create an AP Statistics study plan which outlines dates, goals, and material which you would like to have covered by a particular time. Also, add in any times for practice exams.
20. **Read your Stats textbook and take notes accordingly.** Throughout the year you should be reading your book and creating notes to aid you in studying for the test. If you missed a chapter or are just looking for better notes, check out this chapter by chapter outline.

21. **Make sure that you can differentiate between mean and median.** You should also know the equations for each. The median is simply the median value in the list of all values arranged from smallest to largest or the average of two middle values. There are two means which can be taken, this includes the sample mean, and the population mean. The formulas for both are as follows: Population mean = $\mu = \Sigma X / N$
Sample mean = $\bar{x} = \Sigma x / n$
22. **Review the Type I error, Type II error, and Power concepts in hypothesis testing.**
Type I Error – When it is true, this error rejects the null hypothesis.
Type II Error – When it is false, the null hypothesis is accepted.
Power – The power is equivalent to 1 subtracted from the probability of a Type II error. This is the probability that the right decision is made.
23. **Familiarize yourself with frequency tables and bar charts.** Tables and graphs will be used throughout the AP Statistics exam. Practice reading and interpreting them to ensure you are familiar with how to find values as well as how to answer questions based on the graphs.
24. **Know the difference between left and right skew.** When distributions have more observations on one side than the other, the graph is interpreted as being skewed. When observations are more substantial on the left side of the chart, they are skewed right; this also means that the mean will be larger than the median. When the observations are more substantial on the right, they are skewed left which also means that the mean is smaller than the median.
25. **Mimic your test environment.** When working through practice exams, it may be helpful to mimic your test environment. Seclude yourself in a room with no distractions and time yourself through each portion of the test. Do this during the completion of the diagnostic test to thoroughly assess your study needs.
26. **Hire a tutor.** If you feel as if you won't be adequately prepared on your own or are struggling to do well in the AP Statistics course, hire a tutor. A tutor should be someone who is exceptional at the material and who has already taken the exam and achieved a 5. This could also be a potential college freshman.
27. **Get a good night's sleep before the exam.** This is the oldest and most common tip you will receive for any AP exam or general test. It is imperative to be well rested and prepared as the exam will last 3 hours.
28. **Take breaks while studying.** Remember to take breaks while studying to ensure that you are retaining the material. When you are frustrated, it's easy to become distracted and let your mind wander. However, remaining focused is critical. Take small breaks and look away from the material when feeling flustered to reenergize.

29. **Know how to identify a binomial situation.** There are four necessities which must be present for a chance binomial to occur. These requirements are listed below.

A set number of trials.

Each trial has two outcomes. These outcomes should be labeled as failure or success.

The success probability remains constant on each trial.

Each trial is independent.

AP Statistics Multiple Choice Tips

AP Statistics Multiple Choice Tips

30. **Answer all questions.** There is no penalty for guessing. Therefore, if you feel that you are running out of time and do not have time to entirely give your all to the questions, pick an answer which you think is the best.
31. **Know your z.** Knowing $z = 1.645$ for 90% confidence intervals and $z = 1.96$ for 95% confidence intervals will save you a little bit of time.
32. **Use other questions as clues when in doubt.** If you are stuck on a question or unsure of a vocabulary term, skim through the other questions for context clues on what the word means or how to solve the problem.
33. **There is no harm in guessing.** Do not leave any questions blank. There is no penalty for guessing. Use sound reasoning and the process of elimination to select the best answer when you are unsure.
34. **Pay attention to graphs and charts.** When taking the exam and answering any practice questions make sure that you are carefully reading any charts and the associated question to ensure you are not being tricked into picking a common answer instead of the correct one.
35. **Highlight important words and phrases.** When attempting to answer questions, highlight essential words or phrases which will help you identify the statistical topic as well as the answer.
36. **Your graphing calculator is a tool, not a crutch.** Although you will have a calculator present, make sure that you are not relying too heavily on the programming from your calculator. You should know the material well enough for the calculator to be a helper and nothing more.
37. **Practice with previous AP Statistics Exams.** Use previous exams multiple choice questions as practice problems to ensure you are not only doing questions correctly but that you are following the format in which items will be in on the exam.

AP Statistics FRQ Tips

AP Statistics Free Response Tips

38. **Show all your work.** Make sure that you are showing all your work. Also, ensure that you are subbing numbers into your formulas instead of merely showing the notations. Show all the steps clearly and accurately. Never copy from your calculator.
39. **Know your definitions.** Misuse of jargon will result in the deduction of points from your exam. Be careful about how you are using definitions which can be found in your textbook. Examples of misused words include 'biased,' 'normal,' 'skewed' or even 'blocking.'
40. **Describe your graphs or charts with confidence and knowledge.** When describing a graph or chart, there are certain things which should be mentioned. These items include
 1. **Scatterplots:** Comment of the shape and direction of the figure. You should also provide information concerning the strength of the relationship and patterns or deviation in the data.
 2. **Residual plot:** You should know how this differs from a scatterplot as well as mentioning the balance of residuals, size, and random distribution.
 3. **Shape:** Do not confuse symmetric with being equally distributed.
41. **Watch your notation.** When using notations in your answers make sure they are being used correctly. It is better to explain what you mean rather than using shortcuts or notations. Jumbling the symbols for mean or even \bar{x} is easy. Only use symbols of which you are one hundred percent sure.
42. **Practice your free response questions frequently.** Put aside some time during a set interval, weekly or bi-weekly, to practice your free response questions. There are several questions available on the College Board website with previous FRQs and their answers. Use these items to familiarize yourself with the format of the second half of the AP Stats exam.
43. **Frequently practice the investigative question.** Number 6 on the AP stats exam is one of the hardest problems. It is an investigative task. This question is meant to be solved in thirty minutes. Aside from being the hardest question on the exam, it requires the most work. It has several parts and requires the highest skill level. Be sure to write something for each section as partial credit is given.

44. **Know each question's worth:** There are six questions on the free response portion of the exam, and some of the scorings may vary. The investigative task is worth 25% of your overall free-response score. One to five account for the other 75% of your score. This means they are each worth 15%.
45. **What exactly is the "investigative task.?"** This question presents you with the material you haven't explicitly learned and gages your ability to solve it. You will be provided with background information on the problem. However, you will need to be able to apply the things you have learned in the past on this question in a new and different way.
46. **Watch your time.** Many testers do the questions in numerical order and do not leave enough time for the last question. Jump around as needed and do not leave any questions blank. Make sure you keep up with time to ensure you get all of your information on the page.
47. **Take as many points as you can get.** One thing you should never do is leave a question blank. There are no point deductions for the wrong answer. Evaluate the problem, make your best attempt and provide a reasonable solution. You will still receive some points for attempting and even more for the work being shown.
48. **Hypothesis tests are essential to know.** Make sure that you are aware of how to test for significance and know when to use z or t statistic, show dof, p values, and confidence intervals.
49. **Explain the reasoning behind your work.** Graders are looking to see that you know what you are talking about and not merely guessing. If you are asked to choose between multiple options, make it clear as to why you wanted the answer that you did and why you did not accept the others.
50. **Annotate the questions as needed.** On the exam, you should be reading for understanding. Try to underline keywords or phrase in the questions to aid you in reaching a correct answer.
51. **Only provide ONE answer.** When answering your free response questions never offer more than one solution. If you do so, the worse answer will be taken and graded. Make sure your answer is clear and labeled.
52. **Be as neat as possible.** Some problems require a variety of steps to answer. Make sure that your work is organized and neatly written. Make it as easy as possible for your grader to ensure you receive maximum points.
53. **Do not overload your answer with jargon.** Only use vocabulary words and phrases of which that you are sure. Using the biggest or best words will not get you more points on a question.

54. **Understand hypothesis testing. When asked about the hypothesis test make sure you can do one or all of the following to ensure maximum points.**
 1. Clearly, state the hypotheses. This can be done in words or even symbols.
 2. You must choose an accurate inference procedure for the question. You will then need to verify the conditions for using it.
 3. Calculate the P-value and test statistic.
 4. State a conclusion which can be linked to your P value.
55. **It's okay to make up a value if you don't have it.** If you are struggling with one section of a question and it is needed in a later portion, it is okay to make up a value and keep solving the problem. However, you should note that you have made up value. If you are uncomfortable making up a value, clearly explain the steps you would take if you did have the value to solve the problem.
56. **Labeling your answers is essential.** Although marking your overall work is necessary, it is just as needed to label the axis of your graphs. Do not merely copy from your calculator screen. Labeling proves that you know what you are looking for and how to arrive at it.
57. **Know why you are using a specific formula.** Never guess when using a specified formula. To ensure you are doing the correct steps, make sure you know exactly why you are using a given formula.
58. **Space is not reflective of the length of your answer.** The amount of given area in the free-response section of the exam does not directly correlate to the amount you should be writing. Instead, you should be writing just enough to answer the question and provide any justification needed entirely.
59. **Make sure that you are following all given directions.** If your question tells you to "justify" or "explain" an item, make sure that you are as specific as possible. You should also provide examples when able.

Tips from AP Statistics Teachers

Tips from AP Statistics Teachers

60. **Start with the investigative portion.** When beginning the free response part of the test starts with the investigative task. It is worth a sizable percentage of the part 2 score and should take at least 30 minutes to answers. The other questions are less complicated to answer and can be done after completion.

61. **Practice investigative questions from the past.** Due to the nature of the investigative task or number 6 of the FRQS, it should be practiced often. This question is meant to test your in-depth knowledge
62. **Check out the list of essential Concepts to know.** Click [here](#) for a teacher made the AP Statistics exam review sheet to see essential concepts which are not on the AP Stats formula sheet.
63. **Do not use calculator jargon on the exam.** Do not use expressions from your calculator when completing your answers. You should be using the terminology which is prevalent in your AP Statistics review book and textbook. You should also not be writing calculator directions when showing your work.
64. **Question 1 is the easiest, gage your time accordingly.** After you have completed item 6, knock out question one as it is one of the easier FRQ questions.
65. **Be careful when rounding your answers.** If you begin rounding your answers too soon on step by step problems, your final solution could be wrong.

Tips from Past AP Statistics Students

Tips from Past AP Statistics Students

66. **Make a calendar or a schedule for when to study.** Use the calendar to gauge the time left until your exam as well as often you should be studying. Prioritize the exams you are most concerned with passing or on which you want to perform the best. For example, if you plan on majoring in mathematics, your AP Art exam should not take up the most time on your schedule.
67. **Immerse yourself in the material a few days before your exam.** If you have the time, spend at least 3-4 days before your AP Statistics exam only studying for that subject. This way the material is fresh and the main thing on your mind.
68. **Read the AP FRQ responses that receive the highest amounts of points.** The college board site offers exam answer keys and sample student responses from previous years. Make sure that as you are practicing your responses, you are reviewing the responses that received the highest points in preparation for what to expect and what the graders are looking for.
69. **Review Chi-Square Distribution.** Make sure that you know how and when to use the Chi-Square Test for Independence, Chi-Square Goodness of Fit Test and chi-square test of homogeneity.

70. **Spend some time reviewing confidence intervals.** Confidence intervals are used to define the total of uncertainty connected with a sample estimate of a population. To correctly show a confidence interval, you will need three pieces of information. This information includes the level of confidence, the margin of error and the sample statistic.
71. **Take advantage of your resources.** Outside of your textbook and the AP exam review book, there are many resources available to you. These include YouTube, KhanAcademy, teacher resources and so much more. Forums for students taking AP Statistics can also be an excellent resource for interacting with students who have taken the exam in the past or who are in the same boat as you.

Although this AP Stats list provides a multitude of tips and strategies for getting a five on your AP Statistics exam, the most important thing you can do is get a head start on your studying. It is vital that you understand how to apply many concepts and topics within AP Statistics and explain them with sound reasoning. That level of understanding does not come overnight.

It's important to remember that although this is a math course, its not all about math. AP Statistics is a course which aids you in analyzing and synthesizing a variety of data. Although exam season can be overwhelming, this list should not only assist you in what to study but how to review as well for the AP Statistics exam.

AP US Government Tips and Test Taking Strategies

 conquereyourexam.com/ap-us-government-tips/

If you're planning on taking the AP US government test you want to make sure that you're paying close attention to all the tips you can find. These AP US government tips and test-taking strategies should all help you in the process. We're going to look at what it will take to help you get a 5.

You want to make sure that you're getting the best score you possibly can with this test because you want to get the credit from a college or university. You definitely don't want to be taking these super hard classes only to not get credit for the work you've put in when it comes down to it.

In this AP government study guide we're going to focus on some tips and some areas that people who have taken the test say are going to be the most important. These are areas where you're going to want to study, specific ways you'll want to study and what you'll want to do when it comes to test day.

CollegeBoard is responsible for the test itself, and there will be qualified proctors that administer the test as well as readers who are responsible for the grading process. Each of these individuals will be responsible for the overall score that you get on your test and determining whether your answers are accurate or not.

If you're using this AP gov exam review, you're hopefully going to have a bit of a leg up when it comes to test time. We'll go over some of the more general tips you'll need to know for studying and test day, and we'll also go over some of the specific things you need to know for the multiple choice section and the free response section.

Let's take a closer look at each of the strategies that we've found in our AP government review packet so you can hopefully do great on your test.

If you're looking for additional resources, **[check out our guide to the best AP US Government review books here.](#)**

 **AP US Government General Study Tips**

General How to Study for AP US Government Tips

First, we're going to take a look at some of the general tips that you're definitely going to need to know for your [AP gov review](#). These are things that are going to help you in preparing so you can make sure that you have the right topics down and that you're going through the process in the best way possible. Whether you're taking a closer look at your AP government course description or taking an AP gov practice test, these are important steps.

1. **Know your vocab** – First up, there's a whole lot of vocab to this topic and you're definitely going to want to know it. Make sure you go through flash cards or just read through your vocab frequently to memorize it.
2. **Keep track of time** – Your time is likely going to feel short so make sure you're keeping track of how much you have left at all times. You don't want to run out before you get through all the questions.
3. **Memorize key terms** – Some of the key terms that appear in each section of your book are definitely going to be important. Memorizing these is going to be the only way you can keep them straight.
4. **Use CollegeBoard practice questions** – CollegeBoard is responsible for actually making the test so use their practice questions. They definitely know best what's going to be on the test and practicing these questions will help you prepare for your test.
5. **Watch videos** – There are plenty of study videos out there that you can and definitely should take a closer look at. They'll help you understand more about what the test will cover and even about the different parts of the class that you should know.
6. **Read the text** – Go back through and read your AP US government and politics textbook, paying close attention to the specific events and people that are most important. Don't forget to take a closer look at key terms and vocab as well.
7. **Know the areas you aren't familiar with** – Pay close attention to what you don't know. You want to work on these areas the most because they're the ones that are going to make the biggest difference on test day.
8. **Time yourself** – When you take a practice test make sure that you're actually timing yourself to make sure that you aren't taking too long on each of the questions. You want to make sure you're going to finish everything in time on the day of the test.
9. **Cut your time short** – Set a timer when you're working on practice tests and set it for slightly less than the amount of time you actually have. This will help you get done more quickly so you can be sure you don't run out of time the day of.
10. **Take breaks in your study periods** – Don't sit down and study for 10 hours straight because all you're going to do is wear yourself out. Instead, make sure that you take at least a few breaks along the way. Usually 10 minutes for each hour is a good standard.
11. **Consider the value** – Not all of the questions on your test are weighted the same. The multiple choice questions are going to be worth less because the entire set is worth 50% of your grade whereas your free response questions are also 50% of your grade and you only have 4.

12. **Take practice tests** – Don't ignore the opportunity that comes in the form of practice tests. The official ap us government practice test is going to give you a good idea of what you can expect on test day, especially if you do them under the time restrictions.
13. **Make flash cards** – Flashcards can be used to remember anything from vocab to people, places, and dates. Make sure you create flashcards for the specific things that you have trouble remembering and keep them with you all the time.
14. **Know what's actually going to be tested** – Look up the specific topics that are going to be tested and only study those. You don't need to worry about areas that aren't even going to be looked at.
15. **Start studying early on** – The earlier you start studying for your test the less you're going to have to cram at the last minute. You'll be able to work your way through the different sections more slowly.
16. **Study gradually** – If you're trying to cram too much you're not going to remember most of it or you're going to struggle to actually pay attention. If you're gradually working your way up to studying more and more you'll be better prepared.
17. **Use study books** – Study books and guides are going to give you the basic information that you need when it comes to specific topics and areas of concern. Plus you'll have practice questions and tests.
18. **Study during your course** – If you're still taking the course this is the best time for you to be studying. Make sure you're paying attention in class and taking notes on concepts and specific events.
19. **Set a study schedule** – Having a study schedule will make sure that you're actually sitting down and getting the studying done. You definitely can't afford to miss out on anything.
20. **Try different techniques** – There are all kinds of different study methods and techniques that you could try and you want to try out any and all of them. Work on different methods until you find something that seems to work out best for you. That's where you'll remember the most.
21. **Get a tutor** – A tutor isn't for everyone, but in this section a tutor can actually be a whole lot of help. They may be able to help you get through areas you can't remember or just don't understand on your own. They also focus on what you need rather than on a general outline or overview.
22. **Create outlines for chapters** – Creating an outline for each chapter is going to make it easier for you to remember the highlights and the key points. Make sure to write out specific events and important people. When you look at your outlines you'll have a better idea of what you need to work on.
23. **Make your own notes** – There are plenty of notes out there that you can take a look at or try to use when you're studying but your own notes are going to be the best way to go. You know what you need to practice best and you know how you learn best as well.

24. **Use mnemonics to memorize information** – You can create your own mnemonics and often they can be extremely simple and the best way to memorize some of the information you need, like legislation and even presidents.

AP US Government Multiple Choice Tips

AP US Government Multiple Choice Tips

The first part of the test is going to be the multiple choice section, which consists of 55 questions. You'll have a total of 80 minutes to answer all of these questions, which means you have more than one minute per question and this part counts for 50% of your total score. Make sure you're paying close attention here and that you're getting through all of the questions one way or another.

25. **Know what the question is asking** – The first thing is to pay attention to what the question is asking. If you don't know what it's asking or if you assume you could end up choosing the wrong answer when you know the right one.
26. **Eliminate answers that are wrong** – If you read through the question and the answers and aren't sure of the answer the first thing to do is eliminate any that are absolutely wrong.
27. **Don't pick the longest answer** – Of course, sometimes the longest answer might be the correct one but don't pick it just because it's the longest answer. Instead, look at all of the answers and choose the one that seems to fit the question best. This could actually be the shortest or simplest answer.
28. **Create your own study questions** – When you're studying for this section of the exam take a look through your book. Come up with several study questions for each chapter that relate to the most essential information and then work on the answers.
29. **Keep track of your answer sheet** – If you do jump around on the questions, you need to make absolutely sure you pay attention to your answer sheet. Make sure that you are matching up the question you're trying to answer with the right bubbles on the answer sheet, or you could end up with wrong answers that you actually knew.
30. **Look for the best answer** – Don't jump immediately on the first answer that's correct. Instead, look at all the answers and choose the best one. It's possible that more than one of the answers will be right, but one is going to be best.
31. **Eliminate answers that are not 100% right** – If you're not confident what the answer is you should immediately eliminate any answers that are not 100% correct. If they're not 100% correct, then they are not the right answer.

32. **Answer the question before you read the answers** – This might sound strange but when you read the question try to come up with the solution before you read the options. Don't take too long at this, but if you know the answer before you read them, you can pick that choice and move on fast.
33. **Read every word** – Sometimes one word will eliminate an answer and if you're not totally sure about what the correct answer is that's where you're going to start narrowing things down.
34. **Answer easy questions first** – Skim over all of the questions and find the ones that you already know. These are the questions that you should be answering first, so you have more time for the rest.
35. **The questions are weighted equally** – When it comes to the multiple choice questions every one of them has the same weight. So if you manage to evaluate 50 questions thoroughly, it's going to be better than if you answer the ten really hard ones and then guess at others.
36. **Watch for 'all of the above'** – You may actually find questions that give you this as one of the options, and it's actually likely that this is going to be the answer if it's one of the options that you're given.
37. **Make a note of vocab you don't know** – When you're studying you should immediately note down any vocab that you don't know. That way, you're going to have a reference of what you should be studying next.
38. **No points taken off for incorrect answers** – You won't lose points for an incorrect answer so make sure you're at least writing something down. Use the points we already mentioned to figure out how to answer.
39. **Study graphs or charts carefully** – If you're given any type of graphics including graphs and charts make sure that you study it carefully. Assume anything on the graph is true and make sure you understand it.
40. **Keep track of what the questions are about** – Most questions in this section are going to focus on relevance and significance and relationship between things so keep this in mind when you answer.
41. **Trust yourself** – If you think you know the answer and you think one of the answers just sounds right or feels right then go for it. Don't second-guess yourself when you're in the middle of the test.

AP US Government FRQ Tips

AP US Government Free Response Question Tips

When it comes to the AP government FRQ section, you're going to have four questions with a total of 100 minutes to answer them. This means you're going to have approximately 25 minutes per question, which should be more than enough for you to get your thoughts and ideas out there. This section also counts for 50% of your total score.

42. **Think about the topic before you write** – Before you write anything down make sure you think about what the topic of the prompt is and what the topic of your response is going to be.
43. **Make notes before you write** – Make some quick notes about what you want to write before you actually start to write anything. This is where you're going to figure out the basics of what you're trying to say.
44. **Answer each part of the question** – These questions are going to have multiple parts so make sure that you look at each one and that you actually answer each one so you can get the full credit.
45. **No five-paragraph essay required** – You do not need a full essay with an introduction, a body, and a conclusion. You can get by with a much shorter response to the prompt.
46. **Include only what's needed** – Don't go overboard trying to add on a lot of information just to hopefully get what you need. Instead, try to focus your answer and give only the information that's actually needed to get your message across.
47. **Show that you understand** – The most important part of the process is showing that you understand what the material says and what it means. If you can prove this you're going to have a better chance of getting points on these free response questions.
48. **Use old FRQ's** – Studying old versions and old prompts from the official site (CollegeBoard) is going to give you the best possible resource. You'll be able to see sample responses as well that show you what they're looking for.
49. **Use similar vocabulary** – When you answer a question make sure you repeat similar vocabulary back in your own response. This shows you read and actually understand the question.
50. **Stick to the proper terms** – If you don't know how to use a term properly or you're not sure it's the right term just avoid it. You're better off explaining out what you mean than misusing a term. You could lose points if you're not careful.
51. **Know your current events** – Before you walk into the test, you should have a good understanding of current events. You don't need to be up to date on everything, but being able to use current examples will help you.
52. **Know your presidents** – Make sure you have a good understanding of the presidents and something that they accomplished or were known for during their presidency. This is going to help you with examples and explanations.
53. **Know your legislation** – Legislation is another area that you should spend a lot of time and really focus on. This could definitely be a big part of your free response prompt.

54. **Use specific examples** – Using specific examples is going to help the reader to know that you know what you're talking about. It's going to show that you understand the purpose of the prompt itself.
55. **Use more than one example** – If you are asked to provide an example provide more than one. You won't be penalized for extra information but using multiple examples could give you the points in case you made a mistake with one.
56. **Practice essay writing** – Before you get to test day you should know how to write an essay. Keep in mind that it doesn't need to be a full 5-paragraph essay, but it should still be easy to read and understand.
57. **Review old rubrics for grading** – Look at what the old rubrics say were the grading scale for FRQ's. You may be able to get a better understanding of what could be graded on your test.
58. **Choose a topic you're comfortable with** – You will have some flexibility on what you write here, and you may have some flexibility in how you choose what questions to answer. Choose a topic you feel comfortable about and a view that you can easily defend.
59. **Label multi-part answers** – When you write out the answers to a multi-part test make sure that you're labeling where each portion of the answer actually is. This will make it easier for the reader to find.
60. **Make sure to describe and explain as asked** – Some questions may ask you to describe or explain your answer. Make sure that you do so or you will miss out on points.
61. **Explain your evidence** – If you're using any kind of evidence or facts you want to explain why you're using them. Point out that they back up your point or use them as a counterpoint. Just make sure you express what they're actually doing for your essay.
62. **Write the question back** – Use the question as a jumping off point and parrot back the first part of the question as the first part of your answer. This helps you to stay more focused while you're answering.
63. **Answer parts of the question you know first** – If you don't know all of the parts of the question right away, you can start out by answering only the parts of the question that you already know.
64. **Mark each question** – The different parts of a question may not always be spelled out easily so as you're reading mark each part of what you're being asked. Pay attention to how many different questions you need to answer and underline or circle each to make sure you answer it.
65. **You can add notes and arrows** – If you need to add in additional sections or if you need to rearrange things you can add notes or arrows in other sections and they will be read.

66. **Start with the easiest one** – Take a few minutes to scan through the different free response questions that are in the test and start with the ones that you know the best. Once you’ve completed the one you know the best move to the one you know second-best and so on. Do the one you know the least about last, so you don’t waste time.
67. **Pay attention to all of the actions required** – Look at the verbs that are included in the question. These are the things that you’re being asked to do, and you need to make sure that you’re addressing each one of them when you write out your response. Don’t skip over an action verb.
68. **Focus on the facts** – Don’t get caught up in your own personal opinions. Instead, focus on the specific facts that are related to the question at hand and use those to create your answer. Your opinions won’t earn you points.

AP US Government Test Day Tips

AP US Government Test Day Tips

It’s essential that you’re fully prepared when it comes to test day. You definitely don’t want to wake up the morning of and realize that you have no idea what you’re doing and that you’re not prepared for the day. By following each of these tips, you’re going to be better prepared for what needs to be done.

69. **Know what’s allowed** – Know what you’re allowed to have and what you aren’t. Make sure that you leave anything you aren’t supposed to have in a vehicle or at home that day.
70. **Get there early** – You should definitely be early for your test so you have plenty of time to park, find a seat and then relax for a few minutes before the test begins so you can recharge.
71. **Practice the drive** – You should practice driving from your home (or wherever you’re leaving from) and driving directly to the exam site the day before (or a few days before) the exam. Make sure you know how long it will take to get there, especially if you’re traveling over tracks or a bridge or in bad weather.
72. **Have everything you need** – Make sure you have all of the things that you need for the day, including things like pens and pencils, sharpeners and anything else that’s approved for test day.
73. **Get plenty of sleep** – Make sure you sleep well the night before your test and for several days before that as well. Getting plenty of sleep is going to help you focus and feel more well rested.

74. **Eat a good breakfast** – Eating a good breakfast will make sure that you're energized and that you're not going to be distracted by your hunger.
75. **Relax the day before** – The day before the test is not a good day to actually be studying. At this point, you should be resting and making sure you're prepared for the next day.
76. **Stick to a normal routine** – The morning of your test make sure you're trying to stick to your normal routine as much as possible. You don't want to get a lot of coffee or take medications or anything that's going to possibly throw you off your normal.
77. **Make the most of breaks** – You'll have several breaks throughout the test period. Make sure that you're using them and that you're relaxing on each break rather than stressing about the next section or the last one.
78. **Know where and when to be** – Before test day make sure that you are checking out where you're supposed to be and when you need to be there. That way you're going to be fully prepared for the day of the test, and you'll be able to relax.
79. **Have good erasers** – This is actually an extremely important tip because if you aren't able to erase an answer bubble all the way you could end up with an incorrect answer. You need erasers that are going to clear an answer you decide to change completely.

Hopefully, each of these tips is going to make it easier for you to prepare for your test and take your test when the day comes. You're hopefully going to be better prepared for the day, and you'll be able to focus on answer the questions and actually knowing the answers. Studying areas like presidents, events, legislation, and vocab are definitely going to help you. Using old questions to study, using your AP government and politics textbook and making sure that when you get there you actually answer every part of the question is also going to be very important. Take a little bit of time to look over these tips and then make sure you put them into practice when the day comes.

AP US History Tips and Test Taking Strategies

 conquereyourexam.com/ap-us-history-tips/

Throughout this post, we're going to help you understand AP US History tips and test-taking strategies so you can get a high score on your test. We'll talk about the different sections that include the multiple choice section, document-based questions, and long and short essay questions. For those who really want to know how to get a 5 on AP US History, this is a guide you'll want to look at closely.

If you've been taking AP courses then you definitely want to get credit for all those things that you've done and learned, right? And that's where this guide is going to help you focus a little more and figure out how to get a 5 on AP US History.

The College Board hosts AP tests, and they, in general, look at how well you understand the material that you've learned throughout the class. Whether you've mastered the material or not is then used by colleges to determine if you should be able to avoid taking specific courses once you get there.

Of course, there are different qualifications and rules when it comes to what each college thinks of as a good score or a score adequate enough to get you out of retaking the course. For most, you'll need at least a 4 or a 5. So, let's see what some of the best tips and tricks are.

You'll find that how to get a 5 on APUSH is actually not as difficult as you might have thought if you know how to get the right advice from students, teachers and other resources. We'll take a closer look with this AP US History review.

If you're looking for the **[best AP US History review books, check out our comprehensive guide here.](#)**

General How to Study for AP US History Tips

When it comes to your general studying for how to get a 5 on the APUSH exam, you want to make sure you look at things like note taking and reviewing the material. Some of this may seem obvious, but that doesn't mean you should skip over it. Sometimes, it's the obvious things that we forget about. The overall test is 3 hours and 15 minutes and covers 3 sections total. This includes the multiple choice and essay section, with short essay, long essay, and document-based questions with different APUSH themes.

1. **Slow down and take it one chapter and one period at a time.** When you're figuring out how to study for AP US History, you want to make sure you take things slowly. That means not getting too caught up in just reading the text but slowly evaluating each chapter and each time period, one at a time. That way, you can make sure you're not missing out on any of the critical information of what happened in each portion of history that might be covered on the exam.
2. **Take active, structured notes.** Taking notes is essential, but you want to be very careful about how you take the notes so you can make sure that you're paying attention while you write. It can be straightforward to just copy information without paying attention to what you're doing at the time. Your notes should also be highly structured so you can quickly locate the information and know when and how it all took place.
3. **Have physical copies of your notes.** Physical copies of your notes are great because you can evaluate them as a whole. Digital copies are starting to be more popular, but you can't have them with you in some places, which can make it challenging to study whenever and wherever you have the time. Physical copies also make it easier to analyze your notes and highlight, like in the next point.
4. **Highlight key terms in your notes.** Key words, key events, and key people are extremely important, so make sure you're highlighting these sections so you can make sure that you know where to go back to at a later time. These will generally be the most critical points and the ones that questions will focus on. Highlighting makes sure that when you do study, you can skim through and quickly pick out what you need to know.
5. **Check note sites to make sure you have the most critical information.** You should use note sites to double check your own notes and make sure you've captured the full information, not as a replacement for taking your own notes. This tip is brought to us by a YouTube video from Luke Sauls, so make sure you check it out for even more great tips for this exam.
6. **A combination of notes, online studying and videos will prepare you best.** If you're really looking to nail down a little of everything your best bet is to cover three different areas, your notes, online study prep, and videos. These three things together are going to give you the all-around knowledge that you need in order to understand what's going to be on the test.

7. **Grammar, sentence structure, and dictation do not matter.** This is a US history test, so mostly the people grading it are concerned with whether or not you know the information, not whether or not you know where to put a comma. So, if you're rushing along and forget a little of your sentence structure information, that's not going to be a problem, and it's not going to cost you any points. For this and other tips, you can also check out Josh Beasley for more information.
8. **Take an APUSH practice test.** Practice tests are going to help you out a lot because they're going to prepare you for what the actual questions look like. If you follow the time limitations, also they're going to help you anticipate how to manage your time better as well. All of this together is going to make sure you know what to expect, and you're not totally blindsided when you get into the room.
9. **Review questions and answers from College Board.** This is a tip that comes straight from Stella, and it's definitely something to keep in mind. College Board is the company that puts out the official test so studying their sample questions and answers is going to give you a better idea of what they're actually looking for when you take your own test.
10. **Focus mainly on the thematic elements and how things are connected.** You will find that most of the information you actually need to know for how to study for APUSH, is based around how different events, people, situations and more are connected to each other and the overall theme of those things. This means you don't need to read as much for the specific little details. You can get a whole lot further by taking more time with more critical points.
11. **Make sure you understand the information rather than just memorizing it.** You aren't going to be able just to regurgitate information on this test. You're going to have to exhibit how well you actually understand it, and that means you need to do more than just memorize a whole bunch of facts. You need to review those facts, but understanding how they relate to the greater whole is going to be more critical when it comes down to it.

AP US History Multiple Choice Tips

AP US History Multiple Choice Tips

When it comes to the multiple choice, if you want to know how to pass AP US History it starts with understanding this section. It's a total of 55 questions, and you get 55 minutes to answer them, which means you have only 1 minute per question. It's also worth 40% of your

score, which is the highest single percentage of all of these sections. You'll get a stimulus that you'll have to answer questions about.

12. **Read the questions before you read the passage.** If you read the questions before you read the passage, you're going to have a much better understanding of what you're looking for. This could actually help you take up less time with the multiple choice section because as you read, you can easily pull out the essential points that you need, rather than reading and having to go back again.
13. **Read the question thoroughly.** It's easy to miss words or miss the meaning of the question if you don't read carefully. Missing a 'not' or 'always' in the question could entirely change the meaning of it, as could plenty of other words. That means you need to make sure you're looking at each individual word and not getting too carried away with being quick about your answers. The right answer to the question read incorrectly may be one of the options.
14. **Don't leave any questions blank.** You should never leave a question blank on the multiple choice test. There is absolutely no penalty for getting an answer wrong, so even if you make a complete guess and you have no way of narrowing down the possible answers (we'll get to that in a minute) you still have a 25% chance of getting it right. If you don't answer it, you have a 0% chance of getting it right. Sounds pretty simple, right?
15. **Read the passage thoroughly.** Make sure you read the passage all the way through and that you're thorough about what you find. Just like with the questions, you don't want to miss an important point or something that changes the entire meaning of the passage or a line. You want to make sure you carefully analyze the information you're given.
16. **Start with the questions you know.** Take a few minutes to scan through the questions to see if there are any that you already know the answer to. Make sure you trust your gut but don't guess at this stage of the game. Answering questions you already know will save you time as you move forward; however, it's not going to help you figure out how to ace APUSH.
17. **Just because an answer is factual does not mean it's the correct one for the question at hand.** Keep in mind that more than one answer may actually be factual, but that doesn't mean that it has anything to do with the question. Read through the question carefully and then read through the answers. If you're tempted by an answer make sure that it answers the question and not that it's just a true statement.
18. **Eliminate incorrect answers first.** If you're not sure about the answer to a question the first thing you should do is eliminate all of the answers you know for sure are wrong. Usually, you'll be able to eliminate at least one answer from the running and often you can eliminate at least two. That means you've already improved your chances from 25% to 50%, and that's definitely worth it.

19. **Choose the best answer, not just the right answer.** Multiple answers may be correct for the question. You want to choose the one that fits best. Keep this in mind when you're reading through your questions and answers. Just because one answer is correct doesn't mean it's the only one. Read all of the answers and see which one gives the best result.

AP US History Short Answer Tips

AP US History Short Answer Tips

The short answer section is a total of 4 questions that you get 50 minutes to answer. This comes down to about 12 minutes per question and the section counts for 20% of your total score toward how to get a 5 on APUSH. There are generally multiple parts to answer, and they may refer to pictures, graphs or passages. Figuring out how to prepare for AP US History exam starts with understanding the essays.

20. **If you're not confident on each part to the question answer in a paragraph.** You have to answer every part of the question, so if you're not positive about one or more just start writing a paragraph, beginning with the part you do know. From there, you may find that the rest of the answer comes to you and you can add in the rest of the information as you go.
21. **If you're confident on each part to the question answer sections separately.** If you know all of the answers to each part of the question you can answer each section individually. This may allow you to write less than with a paragraph and also makes it easier for whoever is grading the test to see that you have a complete understanding of the information you gave.
22. **One piece of information is usually enough to answer each section of the question.** Often, all you're going to need is one short piece of information to answer each of the parts. Don't fill in a bunch of unnecessary information when you can explain it with something short and simple. This only takes up more of the time that you have available.
23. **You don't need an essay, so be brief.** This is a short answer section, which means you do not need to write an essay. You can and should be brief because this will give you more time for the next question.

24. **Manage your time effectively.** Remember that you have 4 questions to answer total. This means that you need to hold enough time in reserve for you to get through all of them. Managing your time effectively is the best way to make sure you can at least have a little time to answer each of the questions and may mean you have to skip around between the questions.
25. **Answer every piece of the multi-part question.** Read the question carefully, and then make sure that you answer every part of the question. It will generally have several parts, so don't miss even one section or you'll get marked down when it comes to the final grading process.

AP US History DBQ Essay Tips

AP US History DBQ Essay Tips

A DBQ essay is a document based question, and for those figuring out how to study for APUSH exam, it's one of the hardest ones. You'll have only 1 of these, and you'll get a total of 55 minutes to answer it, but this includes a 15 minute reading period. During the reading period, you are not allowed to write your essay during this time, so it's a good time to read carefully and make a plan. It also counts for 25% of your total score.

26. **Use outside knowledge.** You are required to use information from the documents that are provided, but you are also required to use some outside knowledge. That means information that you already knew and brought into the test with you from your APUSH notes and other AP US History resources. This is where your studying is going to come in and the information that you've been reviewing.
27. **Points are taken off only if the errors detract from the argument.** If you have errors in your response, you will only lose points for those if they detract from the case that you are trying to make. If you use incorrect statistics or facts to back up your argument, these will take away from your point, but tangential comments will not. Make sure you pay attention to what you're writing but don't get too concerned otherwise.
28. **You don't need to use every document you're given.** There will be a set number of documents that you are required to use in your essay. Generally, this is 6 out of 7 total. This means you do not need to find points in every piece of information that you are given and you can choose which ones fit your argument the best and use only those.

29. **Use only the number of documents you need to.** It may seem like a good idea to use all of the documents, but actually, this can take up too much time and may require you to make a stretch where you don't need to. Using only the number of documents that you need will make sure that you're moving on through your essay and that you get it completed within the amount of time you are given.
30. **Practice DBQs ahead of time.** Practicing these types of questions beforehand is going to be extremely important, as they will usually be the hardest part of the entire exam. By practicing early on, you'll be able to get a better understanding of the time constraints as well as what it actually takes to use the documents effectively to make an argument.
31. **Focus on the areas that count.** There are specific areas that are counted when it comes to your DBQ, so make sure that you're paying attention to these. They include thesis and argument development, document analysis, using outside evidence and contextualization, and synthesis. Once you've covered these areas, you'll be able to get the points you need for your DBQ. Don't spend too much time on expanding and adding outside of these aspects. They're not necessary.

AP US History Long Essay Tips

AP US History Long Essay Tips

The final section of the APUSH redesign is the long essay. This is another single question section that gives you 35 minutes to answer. It also counts for the least amount of your score at only 15%. This is still an essential part of the test, however, and a low score here can make it difficult to get a 5 overall on the full test, so make sure you know how to prepare for AP US History.

32. **Brush up on your basic knowledge.** There's no background information provided here, which means you're going to need to have a foundation on your own. This is another area where you're going to use the information that you studied about specific events, individuals and a whole lot more. You'll need to be fully prepared with background information to make sure you can support your point.
33. **Have a thesis.** You aren't required to write a standard 5 paragraph essay, but your essay should have some type of point or thesis. You want to make sure that your thesis is explicitly stated and that it's clear to whoever is reading it. That's how you're going to get the points you need and how you're going to back yourself up with arguments accurately.

34. **Focus on how things are connected.** It's not enough just to state specific things as facts. You also have to explain and show how each of them is connected so you can push your viewpoint forward. If you don't know how to connect them you're going to lose points in this area.
35. **Use PERSIA to support your position.** When it comes to defending the points, you're trying to make, and especially your thesis, there are six specific areas that you should focus on. These include political, economic, religious, social, intellectual and artistic aspects. Each one can help you with connecting different points and facts.
36. **Break it down.** Read through the question carefully and break down what it's asking. This is going to help you answer each part of the question, and it's going to make sure that you don't miss out on something because you're trying to answer one part of the question and completely missed reading the other portion.
37. **Read the question to know what's being asked specifically.** If you misread a question, it could mean that your entire essay is miswritten and that means you're going to lose a lot of points. By reading the question carefully, you're going to know exactly what's being asked. If you read through the question and aren't sure what you're being asked then reread it until you do.
38. **Study previous responses to long essay questions.** Looking at previous answers that scored well on this type of question is going to make it easier for you to do the same. Look at the way that the question was worded and the way that the writer answered that question. There may even be pointers and further information included with sample answers so you can see why it was scored a certain way.

AP US History Test Day Tips

AP US History Test Day Tips

There are always things you should be doing the day of a test to make sure you set yourself up for success. Each of these tips may seem obvious (while some might seem counterintuitive), but they're going to be important. Make sure you prepare for test day the right way, just like you would prepare for any other important day in your life.

39. **Eat a good meal.** Having a good meal before you go to take a test is always going to be important. You're not going to be focused if you're hungry, which is what's going to happen if you skip a meal or if you don't eat something at least reasonably healthy. For those who feel nervous or even ill before a test, it's still crucial that you eat something, even if it's small because you'll start to feel hungry in the middle of the test, distracting you from what you're doing.

40. **Don't study.** It may seem counterintuitive to say not to study on the day of the test, but even the day before the test you shouldn't study. You've already spent a whole lot of time (possibly months or more) studying for this test, so everything you are possibly going to know you already do. If you spend even more time studying it's only going to stress you out, and it could actually cause you to forget more than it helps you learn. You shouldn't be looking up how to study for the APUSH exam the night before, because you should be resting.
41. **Get a good night's sleep.** Getting plenty of rest is like getting a good meal. You aren't going to be focused if you're tired. And if you find yourself dozing in the middle of the test or if you find yourself struggling to have enough energy to keep going it's definitely going to mean getting things wrong or making mistakes that you wouldn't otherwise have made. That's not worth it for anything.
42. **Bring everything you need.** Make sure you review the information about what you can and can't bring with you. Also, make sure you know what you're required to have, like pens and pencils, an eraser, pencil sharpener and anything else. If you bring in materials that aren't allowed you could be disqualified from the test. If you don't bring materials that are required, you may be unable to take the test anyway. Review these lists and notes the day before and again the morning off to make sure you're prepared.
43. **Know when and where to be.** You should know precisely where your test is taking place, including the address of the building and the room number. You should also know precisely when the test starts and when the doors open for you to arrive. If you can, try to arrive as close to the time the doors open as possible. If you are late, you won't be allowed into the exam room, and you'll be unable to take the test. Being early means you'll have time to find a seat, settle in and relax before it's time to start the exam, that's how to succeed in APUSH.

AP US History Review Videos & Resources

Recommended AP US History Review Videos and Resources

There are some great resources out there that can definitely help you along your journey to getting that elusive 5 on your test. While all of the tips and tactics we've talked about are going to push you forward, these are great resources for you to get a little bit more information and continue expanding your test-taking skills and even your specific understanding of this AP test.

44. **Gilder Lehrman site.** If you're looking for an in-depth version of the different periods throughout US history, each of which is covered in your AP US History class, then you can check out this site. It actually provides a video for each period and talks about the important things that happened during that period as well as providing you with study guides for each. Overall, it gives you the information you need to get started on studying or possibly brush up on areas that you're not as familiar with.
45. **Barron's AP US History.** This book is a complete guide to the subject and will provide you with a whole lot of information that's also covered in your textbook. It's designed to be a supplement and to make sure that you've fully grasped any and all of the crucial points. On top of that, it comes with a couple of practice tests so you can try them out and see how well you do. Some even come with online access and additional test prep.
46. **Check out Adam Norris Videos.** These are 10-15 minute videos that concisely explain specific events and periods covered in AP US History and serve as an excellent AP US History study guide. They're super simple, but they still give you a whole lot of information. In fact, they're some of the most popular guides you're going to find about US history.
47. **Get the right review books.** You need to make sure you have the best AP US History review books to look at and study. These are going to give you plenty of information about the specific topics that show up on the test or that at least could show up.

That's a grand total of 47 different APUSH study tips that should help you learn how to get a 5 on the AP US History exam. Whether you've been studying for several months or you're trying to learn how to study for APUSH in one day, you need to remember to check out practice tests and questions, use your time wisely, and read each question carefully. Hopefully, these AP US History tips and test-taking strategies will help you along the way.

AP World History Tips and Test Taking Strategies

 conqueryourexam.com/ap-world-history-tips/

Looking for AP World History tips? You've come to the right place.

When it comes to the AP World History exam, you can definitely expect it to be complicated. In fact, very few people are able to get a 5 on this test, but if you're conscientious about studying and you work hard at it, you should be able to push yourself a little further.

The key is to make sure you study the right ways and that you're paying attention to the material. But if you don't know how to study for AP World History, it can be difficult. Studying along with your class is going to be a significant step, as is taking the test as quickly as you can after completing the course, but we're getting a little ahead of ourselves here. You're not going to figure out how to study for the AP World History exam in one day.

The AP World History test is distributed by CollegeBoard, which means they're an excellent resource for anything you might need. Official practice questions, rubrics, tests, old answers and more are all available through their website. If you want to study these things (trust us, you do) you're going to want to check CollegeBoard to get the information.

We're going to evaluate some of the top AP World History general study tips as well as looking at each of the 2 sections within the test. You'll find multiple choice, short answer, document-based essay and long essay questions for a total of 60 questions and a total of 3 hours and 15 minutes. This is going to be a long test, so make sure that you're mentally prepared for what it's going to take.

If you read through these tips and you work on each of them you're definitely going to be better prepared. You'll know everything you need to know for AP World History. You may not get a 5, but you're definitely going to have an excellent foundation to start from and a better chance of getting a higher score than you would have otherwise.

If you're looking for the **[best AP World History review books, read our guide here.](#)**

 **AP World History General Study Tips**

General Study Tips for AP World History

There are a number of different tips that you can definitely use when it comes to taking the AP World History test. We're going to look at some of the general areas to get started and that way you're going to have no problem getting your primary studying done. These tips are going to help you get a good foundation for how to study the textbook and what you should be doing in order to make sure you master the information (like using AP World History practice test questions). From here, we'll take a look at some of the other tips and things you'll need for the different sections of the test.

1. **Study Daily** – The first thing you want to do is study every single day. By studying each day, you're able to keep the information fresh in your mind, and you don't have to worry about missing any of the topics. You can focus on small sections each day and have time to get through them.
2. **Outline Each Chapter** – You're not going to have the time or the energy to read through each chapter of your textbook multiple times. Try to outline the chapters so you can skim through those outlines or notes when you want to brush up on different parts or different time periods. You'll be creating your own AP World History study guide.
3. **Look for Outlines Online** – If you don't really want to write up your own outlines, you can also look for some outlines that are available online. You may be able to find some that are even better than what you could write yourself. Plus, there are a lot of different classes that are probably using the same text.
4. **Barron's AP World History Book** – This is a great AP World History study book, but the Princeton book is another one that you could use. Each one is going to have some practice questions as well as some easy to read and understand notes. You'll be able to get a good start on your studying this way.
5. **Take Breaks** – You definitely want to add in breaks when you're studying. Breaks are going to help you take a few minutes to breathe, and they're going to make it possible for you to relax. This will make sure you're not cramming too hard and that you're not getting overly stressed.
6. **Use Practice Questions** – Practice questions, especially the official ones from CollegeBoard, are going to help you understand what the test is going to look like. They're going to show you past questions as well as the overall format of questions that you can expect.
7. **Know How to Analyze and Assess Historical Documents** – Historical documents are going to be a big part of this test so make sure you know how to read them and how to get the information that you need from them. You'll need to know how to use that information to support a conclusion as well.
8. **Take Practice Tests** – Use an AP World History practice test. Practice tests are going to help you learn what the test is going to look like and they'll help you with time management. You also want to pay attention to the areas that you're having trouble with so you can focus your studying on those areas as you continue.

9. **Keep Up With the Class Reading** – If you read along with the class and keep up with where you're supposed to be it's going to be a whole lot easier for you to keep building on the knowledge you already have and to make sure that you're not missing anything as you move forward.
10. **Know How to Read Charts, Tables, and Maps** – There will be some of each of these on your exam, so it's vital that you know how to look at them and how to gather information from them. This will definitely play into being able to answer not just multiple choice but essay questions as well.
11. **Know Where You Struggle** – Pay attention to the information that you're missing when you take practice tests or when you try to answer practice questions. You want to make sure that you're studying those areas and spending more of your study time on those subjects rather than things you know.
12. **Study With a Group** – A group can be a big help when you're studying because everyone can help the group with the parts that they know. If you don't know an area, you can get help on it and if you do you're going to be able to work with the group on that section to make it easier for everyone.
13. **Keep Track of Time** – When you're answering questions or taking practice tests, it's vital that you keep track of time. You want to make sure that you aren't taking longer than the time you're going to get on the actual test so you can allot enough time to each question.
14. **Focus on Memorizing General Trends** – The general trends and the ways that different situations and events relate to one another are the primary focus of this test. These are the things that you want to spend your time trying to remember rather than specific dates.
15. **Watch Crash Course Videos** – There are several crash course videos that you can look at online. They'll help you with different time periods, and some are even for the entirety of the world history class and test. Make sure you're checking out a couple of them to get a thorough understanding.

AP World History Section 1 Tips

Section 1 Tips for AP World History (Multiple Choice and Short Answer)

Here is where you'll have Ap World History exam multiple choice and AP World History short answer questions. The first section of this test consists of 55 multiple choice questions (which include AP World History stimulus based questions on the new version) and 3 short

answer. The multiple choice questions are allotted 55 minutes and count for 40% of your total score. The short answer are allotted 40 minutes and count for 20% of your overall score. There are a number of different things to keep in mind for this section, and we'll go over a number of different things including making sure that you answer all of the questions and making sure that you understand the question before you try to answer it. You want to make sure you're paying attention in this section because it's the longest and is worth the highest percentage of points.

16. **Don't Leave Any Questions Blank** – You aren't going to get penalized for a wrong answer, so you definitely don't want to leave any questions blank. If you don't know the question, you can make a guess (we'll talk about that in a minute) because even a 25% chance is better than a 0% chance.
17. **Make an Educated Guess** – If you don't know the answer to the question take a minute to read through the possible answers and see if you can eliminate any of them. Even if you can only remove one, you're going to have a better chance of getting the points than if you don't eliminate any.
18. **Use High-Quality Erasers** – If you need to change an answer, you need to be able to erase the mark you made on your answer sheet entirely. That means you're going to need a good eraser that will make it possible to do so. A bad eraser could mean two bubbles being filled in and that means you don't get any points.
19. **Keep Track of Your Answer Sheet** – If you're going to be moving around and answering questions out of order, it's essential that you keep track of where you are on your answer sheet. Don't skip over bubbles that you're not supposed to or put answers in the wrong bubbles.
20. **Read All Words in the Question** – When you read through your question make sure you read every word of it. Missing a single word or misreading a single word could be the difference between two different answers and you don't want to get a question wrong because you read it wrong.
21. **Answer the Questions You Know First** – The first thing you should do is read all of the questions. Each of the multiple choice questions is worth the same amount of points and each of the short answer is worth the same amount of points. What you want to do is answer the questions you know first, so you have a set number of guaranteed points.
22. **Make Sure You Understand the Question** – If you don't understand the question take a minute to read through it again. You should be able to understand what it's asking you before you attempt to pick an answer but reading the answers may also give you an idea of what the question is trying to say.
23. **Try to Answer the Question Before You Read the Answers** – When you read the question see if an answer comes to you before you even read the answers. If it does, then that's probably the answer (we'll talk about trusting your gut). If nothing comes to you, then go through the answers and see if one sticks out.

24. **Look for Absolutes** – Most of the time absolutes are going to invalidate an answer. ‘Always’ or ‘never’ are generally not the right answer so look for those words to see if they work for the question. If they are going to be the right answer chances are you’re going to know it immediately.
25. **Choose the Best Answer Not Just the Correct Answer** – There could be more than one answer that’s actually correct so make sure you’re looking for one that’s the best possible answer. You want something that best fits what the question seems to be looking for.
26. **Trust Yourself** – If you think you know the answer go with it. Trust yourself and believe that you’re on the right track. Second-guessing yourself usually leads to choosing the wrong answer, and that’s definitely not something you want. You want to trust yourself.
27. **Keep Your Answers Concise** – Don’t write long answers for your short answer questions. These are intended to be quick and concise so try to answer the question in as few words as possible. These are not meant to be multi-paragraph, and that means you should be able to write just a few sentences at most to get your answer out there.
28. **Use Examples** – You do want to have some examples and all the information requested in the question. This might mean using information that’s provided or using information that you already know from your classes. Don’t use your own personal anecdotes or experiences, however.
29. **Stick to What You Know** – When it comes to short answer questions make sure that you’re not jumping too far into things you don’t know. Stick to supporting points and information that you feel confident in and that you know you’re using correctly so you can get the points.

AP World History Section 2 Tips

Section 2 Tips for AP World History (DBQ and Long Essay)

The second section of this test consists of 1 document-based essay and 1 long essay question. The document-based essay is allotted 60 minutes and is worth 25% of your score while the long essay is allotted 40 minutes and counts for 15% of your score. This section has only 2 total questions, but they’re going to require you to do a lot of reading and writing. You’ll need to be clear and concise with the information that you’re presenting, and that may take some practice. We’ll cover some of the essential steps that you should be taking in order to get as high of a score as you can in this section. Here are our top AP World History tips for Section 2:

30. **Memorize the Rubric for Each** – There is an official rubric from CollegeBoard that lets you know what the rules are and how you can get each of the points within the essay questions. They might be about mentioning a specific number of documents or the context. Make sure you memorize this rubric before the test.
31. **Meet Every Point on Rubric** – Make sure you follow and meet every single point from the rubric. That's the only way you're going to get all of the points for the test. Keep in mind you have to have these memorized because the rubric is not going to be provided to you during the test.
32. **Grammar and Sentence Structure Not Required** – This is not an English test, which means you don't need to worry so much about grammar, sentence structure, and a proper paragraph structure. As long as your message can be understood you're going to be fine.
33. **Use Your Key Terms** – Make sure you're using key terms wherever possible. Always use terms that are used in the original question and make sure that you use any that are required. Also, be sure you're using those terms in the correct context to make sure you get the points for them.
34. **Practice Creating an Outline Quickly** – You're going to have a good amount of time but not a lot of extra. Make sure that you practice outlining an essay quickly so that when it comes to test day, you're not going to have a problem with this process. You want to be able to come up with a plan as fast as possible.
35. **Use Specific Examples from History** – You should always use examples from history when you're writing your essay. Make sure that the examples you use are used properly and that they come from the same time period though or you will not get the points for supporting elements.
36. **Take One Side of the Argument in Your Thesis** – The essay you write should always be an argumentative one. That means you need to take a single side of an issue when you write out your thesis. Make sure that what you chose is something that someone could disagree with or it's not an argumentative essay.
37. **Refer Back to the Documents Provided** – Make points that refer back to the documents that you've been provided. You may be asked to make certain connections or to use so many examples. Make sure you're pulling those out of the information that they provide you with.
38. **Do Not Use Your Own Opinion** – Your opinion does not belong in the essay at all. It should only use information directly from the passages and information that's been provided or specific events and facts that you have prior knowledge of in the same historical time period.
39. **Mark Important Parts of the Passage** – As you're reading through the passages make sure that you mark out important sections, information that you're going to use in your argument and any questions that they are asking you to answer so you can find them easily when you get to writing your essay.

40. **Mark the Historical Thinking Questions That Must Be Answered** – In general, this is going to mean compare, analyze, etc. You want to pay attention to what you're being asked so you can make sure you actually answer that question when you get to the part of writing the essay.
41. **Read the Questions and Choose One That You Know Most About** – You'll have three different choices of what you want to write about so make sure you read through them carefully. Choose one of the questions and make it the one that you know the most about.
42. **Mark the Time Frame the Question is Referring to** – As you read make sure you mark what time frame the question is taking place in. You need to use specific examples, and you need to make sure that you have a comprehensive understanding of that time period.
43. **Stick to the Same Argument Throughout** – Keep everything that you say related to the same argument or thesis. You can bring up counterpoints, but you need to stay on the same side of the fence all the way through rather than jumping back and forth too much.
44. **Use a Counterpoint** – A counterpoint will make your argument even stronger and will help you to show that you really understand the topic. This will help you to show you can defend yourself and your point of view as well. You shouldn't use too many counterpoints, however, or you undermine your view.
45. **Know the Category of the Question** – Most questions are going to be either social, political or economic in nature. Know where the question is coming from and what it's asking you so you can make sure that you're answering it properly. You'll want to approach it from the same category.
46. **Read and Analyze All Documents** – Make sure you read through all of the documents and analyze them. This is true even if you're not required to use all of the documents in your answer. Once you read and analyze, you'll be able to decide which ones best support your view and your thesis.
47. **Source for HAPP** – Go through the passages and look for historical context, intended audience, purpose, and point of view. These four things are going to make it easier for you to understand the passages and that's going to make it easier for you to defend your answer with the documents that you've been given.
48. **Use At Least 3 Documents** – You're generally going to need to support your answer with at least three of the documents that you're being provided. Make sure, as you write out your answer, that you've put in supporting (or detracting) points from at least three documents so you can be sure to get all of the points for this section.
49. **No Right or Wrong Answers** – There are actually no right or wrong answers for these questions. The point of these questions is whether or not you've actually answered the question well and whether you've defended your point properly. If you argue well you're going to get the points for the question.

AP World History Test Day Tips

Prepping for Test Day for AP World History

When it comes to getting ready for the day of your test you want to make sure that you know what you're getting into. Here we're going to take a look at some of the essential tips that you should follow in order to be ready on test day. This is going to include a number of different ways to get ready coming up to the day of the test but also what's going to happen the day that you walk in to take the test. That way you can make sure you feel your absolute best, and you can perform to your highest level when you're writing out your answers. Here are our AP World History tips when preparing for test day:

50. **Don't Study the Day of the Test** – The day of the test you should be taking a little bit of time to relax. You want to make sure that you're doing all of the other things that we're going to talk about in this section. Cramming is only going to frustrate and overwhelm you rather than actually helping you along.
51. **Know When and Where to Be** – Double check the date and time as well as the location of the test. You should know well in advance where you need to be, what time to be there and everything else about the day. That way, you can make sure you're calm and collected the day of.
52. **Know What You Can and Can't Have** – Know what the rules are about what you can bring into the test and what you aren't allowed to bring in. You don't want to have to leave anything behind or get disqualified from the test because you brought something in that day that you aren't allowed to have.
53. **Follow Your Routine** – If you usually take certain medications in the morning make sure you do the same on the day of your test. If you typically drink coffee (or don't drink coffee) do the same thing that day. This is going to help you be more in your normal zone that day.
54. **Practice Getting There On Time** – Once you know where the test is being held practice driving there. Practice during the same time of day and if possible on the same day of the week. That's going to make it easier for you to plan for how long it's going to take you the actual day of the test.
55. **Eat a Good Breakfast** – Eat well before you go. Even if you're nervous, it's essential to have a good breakfast so you can be ready to go. Eating well is going to make you more focused, and it's going to keep you from getting hungry when you're trying to take the test.

56. **Get To The Test Early** – You should plan for getting to the testing site early so you can make sure that you can park, take a few minutes to relax and get a seat before the test is going to start. This is going to help you feel mentally prepared for what the test is going to be like.
57. **Get Plenty of Sleep** – Getting enough sleep the night before is going to make sure you're rested and ready to go. If you're tired, it's going to be a lot more difficult for you to concentrate while you're trying to answer questions and you could forget the things that you already knew.
58. **Take Breaks and Relax** – When there are breaks make sure you sit down and take a few deep breaths. Relax during those breaks and take the opportunity to reset yourself for the next section of the test. You shouldn't be studying or trying to cram any additional information during this time.
59. **Be Prepared for the Day** – Make sure you lay out everything that you're going to need on test day. That means all of your pens and pencils, the snacks you're going to take and even the clothes you're going to wear. You want to make sure that you're ready to walk out the door as soon as you get up.

Hopefully, these AP World History tips are going to make it a whole lot easier for you to study for your test and hopefully they're going to help you get the grade that you want. Getting a 5 on your test will be difficult. Very few people are able to manage it. But if you follow this AP World History study plan, you should be well on your way. Just make sure you're taking it easy the day of the test, use your world history practice test and that you're not leaving any questions blank. These are going to be two of the most important things you can do, along with sticking to a single argument in your essay questions.

WRAP UP

Phew! There you have it. We just covered 671 AP study tips. That's crazy!

To review, here are the subjects we went over:

- AP Biology
- AP Calculus
- AP English Language
- AP English Literature
- AP Human Geography
- AP Physics 1
- AP Physics 2
- AP Psychology
- AP Statistics
- AP US Government
- AP US History
- AP World History

Now that you've covered the ins and outs of these tests, you should check our other content at www.conquereyourexam.com.

We detail more things like the best review books for any advanced subject, different tips and strategies for getting a 1600 on your SATs or 36 on your ACT, and more.

On our site, you'll also find our *Ultimate Checklists and To Do Lists for High School*, which is an even more extensive reference to help you get the inside scoop of how to cruise through grades 9-12.

Hope you enjoyed *671 Epic AP Study Tips*; if you did, tell your friends to pick up a copy for themselves!
